## JEE (Main) CHEMISTRY SOLVED PAPER

## Section A

Q.1. A solution of $\mathrm{FeCl}_{3}$ when treated with $\mathrm{K}_{4}$ $\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]$ gives a prussian blue precipitate due to the formation of
(1) $\mathrm{K}\left[\mathrm{Fe}_{2}(\mathrm{CN})_{6}\right]$
(2) $\mathrm{Fe}_{4}\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]_{3}$
(3) $\mathrm{Fe}\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]$
(4) $\mathrm{Fe}_{3}\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]_{2}$
Q. 2. Given below are two statements: one is labelled as Assertion (A) and the other is labelled as Reason (R)
Assertion A: Hydrogen is an environment friendly fuel.
Reason R: Atomic number of hydrogen is 1 and it is a very light element.
In the light of the above statements, choose the correct answer from the options given below
(1) $A$ is true but $R$ is false
(2) $A$ is false but $R$ is true
(3) Both $A$ and $R$ are true and $R$ is the correct explanation of $A$
(4) Both A and R are true but R is NOT the correct explanation of A
Q.3. Resonance in carbonate ion $\left(\mathrm{CO}_{3}{ }^{2-}\right)$ is

Which of the following is true?
(1) All these structures are in dynamic equilibrium with each other.
(2) It is possible to identify each structure individually by some physical or chemical method.
(3) Each structure exists for equal amount of time.
(4) $\mathrm{CO}_{3}{ }^{2-}$ has a single structure i.e., resonance hybrid of the above three structures.
Q. 4. Match List I with List II

| List I | List II |
| :--- | :--- |
| (A) Tranquilizers | (I) Anti blood clotting |
| (B) Aspirin | (II) Salvarsan |
| (C) Antibiotic | (III) antidepressant drugs |
| (D) Antiseptic | (IV) soframicine |

Choose the correct answer from the options given below:
(1) (A) -IV, (B) -II , (C) -I , (D) -III
(2) (A) -II , (B) -I , (C) -III , (D) -IV
(3) (A) - III, (B) - I, (C) - II, (D) - IV
(4) (A) - II, (B) -IV, (C) - I, (D) -III
Q.5. Identify the incorrect option from the following:
(1)
$\sim \mathrm{Br}+\mathrm{KOH}(\mathrm{aq}) \rightarrow \sim \mathrm{OH}+\mathrm{KBr}$
(2)

(3)

(4) $\mathrm{CBr}_{\mathrm{BO}}^{\mathrm{KOH}}$ (alc) $\rightarrow$ OH +KBr
Q. 6. But-2-yne is reacted separately with one mole of Hydrogen as shown below:

$$
\underline{\mathrm{B}} \underset{\text { liq } \mathrm{NH}_{3}}{\stackrel{\mathrm{Na}}{2}} \mathrm{CH}_{3}-\underset{+\mathrm{H}_{2}}{\mathrm{C}} \equiv \mathrm{C}-\mathrm{CH}_{3} \xrightarrow[\Delta]{\mathrm{P} d / \mathrm{C}} \underline{\mathrm{~A}}
$$

A. A is more soluble than B.
B. The boiling point \& melting point of A are higher and lower than $B$ respectively.
C. A is more polar than B because dipole moment of A is zero.
D. $\mathrm{Br}_{2}$ adds easily to $B$ than $A$.

Identify the correct statements from the options given below:
(1) B, C \& D only
(2) A and B only
(3) A, C \& D only
(4) B and C only
Q.7. In the following reaction, ' $A$ ' is

(1)

(2)

(3)

(4)

Q. 8. Highest oxidation state of Mn is exhibited in $\mathrm{Mn}_{2} \mathrm{O}_{7}$. The correct statements about $\mathrm{Mn}_{2} \mathrm{O}_{7}$ are
(A) Mn is tetrahedrally surrounded by oxygen atoms.
(B) Mn is octahedrally surrounded by oxygen atoms.
(C) Contains Mn-O-Mn bridge.
(D) Contains Mn-Mn bond.

Choose the correct answer from the options given below:
(1) A and Conly
(2) A and D only
(3) B and C only
(4) B and D only
Q. 9. Match List I with List II:

| List I | List II |
| :--- | :--- |
| (A) Slaked lime | (I) NaOH |
| (B) Dead burnt plaster | (II) $\mathrm{Ca}(\mathrm{OH})_{2}$ |
| (C) Caustic soda | (III) $\mathrm{Na}_{2} \mathrm{CO}_{3} \cdot 10 \mathrm{H}_{2} \mathrm{O}$ |
| (D) Washing soda | (IV) $\mathrm{CaSO}_{4}$ |

Choose the correct answer from the options given below:
(1) (A) - III, (B) - IV, (C) - II, (D) - I
(2) (A) - III, (B) - II, (C) - IV, (D) - I
(3) (A) - I, (B) - IV, (C) - II, (D) - III
(4) (A) -II, (B) - IV, (C) - I, (D) - III
Q. 10. The correct representation in six membered pyranose form for the following sugar $[\mathrm{X}]$ is

Sugar [X]
(1)

(2)

(3)

(4)

Q. 11. Which of the following complex will show largest splitting of d-orbitals?
(1) $\left[\mathrm{FeF}_{6}\right]^{3-}$
(2) $\left[\mathrm{Fe}\left(\mathrm{C}_{2} \mathrm{O}_{4}\right)_{3}\right]^{3-}$
(3) $\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]^{3-}$
(4) $\left[\mathrm{Fe}\left(\mathrm{NH}_{3}\right)_{6}\right]^{3+}$
Q. 12. Which of the following are the example of double salt?
(A) $\mathrm{FeSO}_{4} \cdot\left(\mathrm{NH}_{4}\right)_{2} \mathrm{SO}_{4} \cdot 6 \mathrm{H}_{2} \mathrm{O}$
(B) $\mathrm{CuSO}_{4}, 4 \mathrm{NH}_{3} \mathrm{H}_{2} \mathrm{O}$
(C) $\mathrm{K}_{2} \mathrm{SO}_{4} \cdot \mathrm{Al}_{2}\left(\mathrm{SO}_{4}\right)_{3} \cdot 24 \mathrm{H}_{2} \mathrm{O}$
(D) $\mathrm{Fe}(\mathrm{CN})_{2} .4 \mathrm{KCN}$

Choose the correct answer
(1) B and D only
(2) A and C only
(3) A and B only
(4) A, B and D only
Q. 13. Decreasing order of dehydration of the following alcohols is
(a)

(b)

(c)

(d)

(1) $b>a>d>c$
(2) $a>d>b>c$
(3) $d>b>c>a$
(4) $b>d>c>a$
Q. 14. Given below are two statements:

Statement I: Chlorine can easily combine with oxygen to form oxides; and the product has a tendency to explode.
Statement II: Chemical reactivity of an element can be determined by its reaction with oxygen and halogens.
In the light of the above statements, choose the correct answer from the options given below
(1) Both the Statements I and II are true
(2) Both the Statements I and II are false
(3) Statement I is false but Statement II is true
(4) Statement I is true but Statement II is false
Q. 15. Choose the correct statement(s):
A. Beryllium oxide is purely acidic in nature.
B. Beryllium carbonate is kept in the atmosphere of $\mathrm{CO}_{2}$.
C. Beryllium sulphate is readily soluble in water.
D. Beryllium shows anomalous behavior.

Choose the correct answer from the options given below:
(1) B, C and D only
(2) A only
(3) A, B and C only
(4) A and B only
Q.16. Which of the following represents the lattice structure of $\mathrm{A}_{0.95} \mathrm{O}$ containing $\mathrm{A}^{2+}, \mathrm{A}^{3+}$ and $\mathrm{O}^{2-}$ ions an are of same representation write correct one?

B

C.

(1) A only
(2) B and C only
(3) A and B only
(4) B only
Q. 17. Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason R Assertion A: In an Ellingham diagram, the oxidation of carbon to carbon monoxide shows a negative slope with respect to temperature.
Reason R: CO tends to get decomposed at higher temperature.
In the light of the above statements, choose the correct answer from the options given below
(1) Both $A$ and $R$ are correct but $R$ is NOT the correct explanation of A
(2) Both $A$ and $R$ are correct and $R$ is the correct explanation of A
(3) A is correct but R is not correct
(4) $A$ is not correct but $R$ is correct
Q. 18. Given below are two statements: One is labelled as Assertion A and the other is labelled as Reason R Assertion A: Amongst $\mathrm{He}, \mathrm{Ne}, \mathrm{Ar}$ and $\mathrm{Kr} ; 1 \mathrm{~g}$ of activated charcoal adsorbs more of Kr .
Reason R: The critical volume $\mathrm{V}_{c}\left(\mathrm{~cm}^{3} \mathrm{~mol}^{-1}\right)$ and critical pressure $P_{c}$ (atm) is highest for Krypton but the compressibility factor at critical point $\mathrm{Z}_{\mathrm{c}}$ is lowest for Krypton.
In the light of the above statements, choose the correct answer from the options given below
(1) $A$ is true but $R$ is false
(2) Both $A$ and $R$ are true and $R$ is the correct explanation of $A$
(3) A is false but $R$ is true
(4) Both $A$ and $R$ are true but $R$ is NOT the correct explanation of A
Q. 19. Match List I with List II

| List I <br> Test | List II <br> Functional group / <br> Class of Compound |
| :--- | :--- |
| (A) Molisch's Test | (I) Peptide |
| (B) Biuret Test | (II) Carbohydrate |
| (C) Carbylamine Test | (III) Primary amine |
| (D) Schiff's Test | (IV) Aldehyde |

Choose the correct answer from the options given below:
(1) (A) - III, (B) - IV, (C) - I, (D) - II
(2) (A) -II, (B) - I, (C) - III, (D) - IV
(3) (A) -III , (B) -IV, (C) -II , (D) -I
(4) (A) -I, (B) - II, (C) - III, (D) -IV
Q. 20. How can photochemical smog be controlled?
(1) By using catalytic convertors in the automobiles/industry.
(2) By complete combustion of fuel.
(3) By using tall chimneys.
(4) By using catalyst.

## Section B

Q. 21. (i) $X(\mathrm{~g}) \rightleftharpoons Y(\mathrm{~g})+\mathrm{Z}(\mathrm{g}) K_{\mathrm{p} 1}=3$
(ii) $\mathrm{A}(\mathrm{g}) \rightleftharpoons 2 \mathrm{~B}(\mathrm{~g}) \mathrm{K}_{\mathrm{p} 2}=1$

If the degree of dissociation and initial concentration of both the reactants $\mathrm{X}(\mathrm{g})$ and $\mathrm{A}(\mathrm{g})$ are equal, then the ratio of the total pressure at equilibrium $\left(\frac{p_{1}}{p_{2}}\right)$ is equal to $x: 1$. The value of $x$
is (Nearest integer)
Q. 22. Electrons in a cathode ray tube have been emitted with a velocity of $1000 \mathrm{~m} \mathrm{~s}^{-1}$. The number of following statements which is/are true about the emitted radiation is
Given: $\mathrm{h}=6 \times 10^{-34} \mathrm{Js}, \mathrm{m}_{\mathrm{e}}=9 \times 10^{-31} \mathrm{~kg}$.
(A) The deBroglie wavelength of the electron emitted is 666.67 nm .
(B) The characteristic of electrons emitted depend upon the material of the electrodes of the cathode ray tube.
(C) The cathode rays start from cathode and move towards anode.
(D) The nature of the emitted electrons depends on the nature of the gas present in cathode ray tube.
Q.23. $A$ and $B$ are two substances undergoing radioactive decay in a container.
The half life of $A$ is 15 min and that of $B$ is 5 min . If the initial concentration of $B$ is 4 times that of A and they both start decaying at the same time, how much time will it take for the concentration of both of them to be same? $\qquad$ min.
Q. 24. Sum of oxidation states of bromine in bromic acid and perbromic acid is
Q. 25. 25 mL of an aqueous solution of KCl was found to require 20 mL of $1 \mathrm{M} \mathrm{AgNO}_{3}$ solution when titrated using $\mathrm{K}_{2} \mathrm{CrO}_{4}$ as an indicator. What is the depression in freezing point of KCl solutions of the given concentration? $\qquad$ (Nearest integer). (Given: $\mathrm{K}_{\mathrm{f}}=2.0 \mathrm{~K} \mathrm{~kg} \mathrm{~mol}^{-1}$ )
Assume:

1) $100 \%$ ionization and
2) density of the aqueous solution as $1 \mathrm{~g} \mathrm{~mL}^{-1}$
Q.26. At $25^{\circ} \mathrm{C}$, the enthalpy of the following processes are given:
$\mathrm{H}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{OH}(\mathrm{g}) \Delta \mathrm{H}^{\circ}=78 \mathrm{~kJ} \mathrm{~mol}^{-1}$
$\mathrm{H}_{2}(\mathrm{~g})+1 / 2 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{g}) \Delta \mathrm{H}^{\circ}=-242 \mathrm{~kJ} \mathrm{~mol}^{-1}$
$\mathrm{H}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{H}(\mathrm{g}) \Delta \mathrm{H}^{\circ}=436 \mathrm{~kJ} \mathrm{~mol}^{-1}$
$1 / 2 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{O}(\mathrm{g}) \Delta \mathrm{H}^{\circ}=249 \mathrm{~kJ} \mathrm{~mol}^{-1}$

What would be the value of $X$ for the following reaction? (Nearest integer)

$$
\mathrm{H}_{2} \mathrm{O}(\mathrm{~g}) \rightarrow \mathrm{H}(\mathrm{~g})+\mathrm{OH}(\mathrm{~g}) \Delta \mathrm{H}^{\circ}=\mathrm{XkJmol}^{-1}
$$

Q. 27. At what pH , given half cell $\mathrm{MnO}_{4}{ }^{-}(0.1 \mathrm{M}) \mid \mathrm{Mn}^{2+}$ $(0.001 \mathrm{M})$ will have electrode potential of 1.282 V ? (Nearest Integer)

Given $\mathrm{E}_{\mathrm{MnO}_{4} \mathrm{Mn}^{+2}}^{\mathrm{o}}=1.54 \mathrm{~V}, \frac{2.303 \mathrm{RT}}{\mathrm{F}}=0.059 \mathrm{~V}$
Q. 28. The density of 3 M solution of NaCl is $1.0 \mathrm{~g} \mathrm{~mL}^{-1}$. Molality of the solution is $\times 10^{-2} \mathrm{~m}$. (Nearest integer).
Given: Molar mass of Na and Cl is 23 and 35.5 g $\mathrm{mol}^{-1}$ respectively.
Q. 29. Number of isomeric compounds with molecular formula
$\mathrm{C}_{9} \mathrm{H}_{10} \mathrm{O}$ which (i)do not dissolve in NaOH (ii) do not dissolve in HCl . (iii)do not give orange
precipitate with $2,4 \mathrm{DNP}$ (iv)on hydrogenation give identical compound with molecular formula $\mathrm{C}_{9} \mathrm{H}_{12} \mathrm{O}$ is
Q.30. The total number of chiral compound/s from the following is

## Answer Key

| Q. No. | Answer | Topic Name | Chapter Name |
| :---: | :---: | :---: | :---: |
| 1 | (1) | Separation technique | General organic chemistry |
| 2 | (2) | Qualitative analysis | Qualitative analysis |
| 3 | (4) | Properties of hydrogen | Hydrogen |
| 4 | (4) | Resonating structure | Chemical bonding |
| 5 | (3) | Classification of drugs | Chemistry in everyday life |
| 6 | (4) | Mixed organic reaction | Halo arenes and Halo alkane |
| 7 | (2) | Properties of hydrocarbons | Hydrocarbon |
| 8 | (3) | Properties of enol | Alcohol phenol and ether |
| 9 | (1) | Compounds of d block | d and f block |
| 10 | (4) | Compounds of s block elements | s block |
| 11 | (2) | Pyranose form of sugar | Biomolecules |
| 12 | (3) | Crystal field splitting | Coordination chemistry |
| 13 | (2) | Example of double salt | Coordination chemistry |
| 14 | (4) | Dehydration of alcohol | Alcohol phenol and ether |
| 15 | (1) | Properties of chlorine | p block |
| 16 | (1) | Properties of beryllium | s block |
| 17 | (1) | Defects in solids | Solid state |
| 18 | (3) | Ellingham. diagram | Metallurgy |
| 19 | (1) | Critical constant of gases | States of matter |
| 20 | (2) | Types of test for identification of functional group | Practical organic chemistry |
| 21 | [1] | Photochemical smog | Environmental chemistry |
| 22 | [12] | Relationship between degree of dissociation and concentration | Chemical equilibrium |

| 24 | [15] | Calculation of time by the help of concentration | Chemical kinetics |
| 25 | [12] | Calculation of oxidation state | Redox reaction |
| 26 | [3] | Depression in freezing point | Liquid solution |
| 27 | [499] | Calculation of enthalpy change | Thermodynamics |
| 28 | [3] | Calculation of pH in electrochemical cell | Electro chemistry |
| 29 | [364] | Calculation of molality | Liquid solution |
| 30 | [2] | Calculation of number of isomers | General organic chemistry |

## Solutions

## Section A

1. Option (2) is correct.

The reaction of $\mathrm{FeCl}_{3}$ with potassium hexacyanidoferrate(II) $\mathrm{K}_{4}\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]$, gives Iron(III) hexacyanidoferrate(II) which has Prussian blue color. $4 \mathrm{FeCl}_{3}+3 \mathrm{~K}_{4}\left[\mathrm{Fe}(\mathrm{CN})_{6}\right] \rightarrow 12 \mathrm{KCl}+\mathrm{Fe}_{4}\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]_{3}$

Prussian blue
2. Option (4) is correct.

Hydrogen is an environments friendly feed because on combustion it produces watch
Also its atomic number is 1 and it is a very light element.
3. Option (4) is correct.

The resonating structures are the hypothetical structures whereas the resonance hybrid is the real structure of the molecule. Thus $\mathrm{CO}_{3}{ }^{2-}$ has a single structure
4. Option (3) is correct.

Tranquilizers $\rightarrow$ Anti-depressants
Aspirin $\rightarrow$ Anti-blood clotting,
Anti-biotic $\rightarrow$ Salvarsan
Anti-septic $\rightarrow$ Soframycin
5. Option (4) is correct.

The neo-pentyl bromide does not undergo an elimination reaction in presence of alcoholic KOH because of the absence of $\beta$-hydrogen.

6. Option (2) is correct.

In presence of liquid ammonia, But-2-yne is hydrogenated to form trans-but-2-ene by antiaddition (Birch Reduction) whereas catalytic hydrogenation produces cis-but-2-ene by synaddition.

Cis But-2-ene is more polar that is why its solubility is more than trans But-2-ene: statement $(A)$ is correct.
Compound (A) has a lower melting point than (B) because the trans isomer is symmetrical and fits in to crystal lattice. (A) is more polar so it has higher boiling then trans from statement $(B)$ is correct.

Cis isomer is not symmetrical thus it will have not dipole moment: It is more polar. Statement (c) is incorrect.
Trans isomes (B) is more stable than is isomer (A): It will be more reactive and will add easily to $A$ than $B$ : Statement (D) is incorrect.

## 7. Option (3) is correct.

(A)
8. Option (1) is correct.

In $\mathrm{Mn}_{2} \mathrm{O}_{7}$, there is $\mathrm{Mn}-\mathrm{O}$ double bond forming a tetrahedral structure and an $\mathrm{Mn}-\mathrm{O}-\mathrm{Mn}$ bridge.

The oxidation state of Mn is +7 in $\mathrm{Mn}_{2} \mathrm{O}_{7}$.
9. Option (4) is correct.

Slaked Lime $\rightarrow \mathrm{Ca}(\mathrm{OH})_{2}$
Dead Burnt Plaster $\rightarrow \mathrm{CaSO}_{4}$,
Caustic Soda $\rightarrow \mathrm{NaOH}$,
Washing Soda $\rightarrow \mathrm{Na}_{2} \mathrm{CO}_{3} \bullet 10 \mathrm{H}_{2} \mathrm{O}$
10. Option (2) is correct.

The -OH groups present on LHS of the Fischer projection are above the plane of the ring.

11. Option (3) is correct.

The crystal field splitting of orbitals depends on the oxidation state of the metal ion and the strength of the ligands. Higher oxidation states of the metal ion
and higher strength of the ligands cause the greater splitting of d-orbitals. In the given complex, $\mathrm{CN}^{-}$is the strongest ligand. Thus, the maximum splitting of orbitals takes place in $\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]^{3-}$.
12. Option (2) is correct.
$\mathrm{FeSO}_{4} \cdot\left(\mathrm{NH}_{4}\right)_{2} \quad \mathrm{SO}_{4} \cdot 6 \mathrm{H}_{2} \mathrm{O} \quad-\mathrm{mohr}$ salt $\mathrm{K}_{2} \mathrm{SO}_{4}$. $\mathrm{Al}_{4}\left(\mathrm{SO}_{4}\right)_{3} \cdot 24 \mathrm{H}_{2} \mathrm{O}$-Potash alum.
The ions of double salts lose their identity in a solution. These compounds are in the solid state but when dissolved in water, their constituent ions, however, their individual properties are retained.
13. Option (4) is correct.

Dehydration of alcohol id directly proportion to the stability of carbocation formed.

(a)

(b)

(c)

(d)

Carbocation (b) is stabilised due to resummons, while can be should as:

14. Option (1) is correct.

When chlorine reacts with oxygen, it can form various oxides such as $\mathrm{ClO}, \mathrm{ClO}_{2}, \mathrm{Cl}_{2} \mathrm{O}$. These oxides are highly unstable and have a tendency to explode. Statement (1) is true.
Chemical reactivity of an element can be determined by its reaction with oxygen and halogens. These element which readily react oxygen and halogens, are considered highly reactive whereas those which don't react easily are considered to by less reactive. Thus statement (II) is also true.
15. Option (1) is correct.
(A) BeO is amphoteric i.e. it shows both acidic and basic character.
(B) $\mathrm{BeCO}_{3}$ is kept in the atmosphere of $\mathrm{CO}_{2}$ because it is thermally less stable.
(C) Due to its small size and high hydration enthalpy, $\mathrm{BeSO}_{4}$ is readily soluble in water.
(D) The anomalous behavior of Be is due to its small size, high ionization enthalpy, and absence of d-orbitals in its valence shell.
16. Option (1) is correct.
$\mathrm{A}_{0.95} \mathrm{O}$ has a metal deficiency defect due to the absence of metal ions where the metal ion $\left(\mathrm{A}^{2+}\right)$ is absent from its lattice site. The electrical neutrality is maintained by the presence of metal ions in a higher oxidation state $\left(\mathrm{A}^{3+}\right)$. Where $3 \mathrm{~A}^{2+}$ are seplaud by $\mathrm{A}^{3+}$ and these one vacaul site per pair of $A^{3+}$ is created.
17. Option (3) is correct.

The oxidation of carbon to carbon monoxide takes place as:
$2 \mathrm{C}(\mathrm{s})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}(\mathrm{g})$.

The oxidation reaction is an exothermic reaction with negative $\Delta H$ and with the temperature rise, becomes positive as the gaseous product is obtained which makes $\Delta G$ negative. Thus, the decomposition of CO is not favored at a higher temperature.
18. Option (1) is correct.

The adsorption depends on the magnitude of the intermolecular forces. A gas with high intermolecular forces gets adsorbs readily. Amongst those listed above, Kr has the highest magnitude of intermolecular forces and thus gets adsorbed more on charcoal.

## 19. Option (2) is correct.

Molisch's Test $\rightarrow$ Carbohydrate detection.
Biuret Test $\rightarrow$ Peptide detection.
Carbyl amine Test $\rightarrow$ Primary amine functional group detection.
Schiff's Test $\rightarrow$ Aldehyde group detection.
20. Option (1) is correct.

With the use of catalytic converters in the engine of automobile vehicles, the release of oxides of nitrogen and hydrocarbons can be prevented which can control the formation of photochemical smog.

## Section B

21. The correct answer is [12].

\[

\]

total moles $=(1+x)$
$\mathrm{P}_{x} \frac{1-x}{1+x} \times \mathrm{P}_{1}, \mathrm{P}_{\mathrm{y}} \frac{x}{1+x} \times \mathrm{P}_{1} \mathrm{P}_{\mathrm{z}}=\frac{x \times \mathrm{P}_{1}}{1+x}$

$$
\mathrm{A}(\mathrm{~g}) \rightleftharpoons 2 \mathrm{~B}(\mathrm{~g})
$$

| $t=0$ | 1 | - | total mole |
| :---: | :---: | :---: | :---: |
| $t=e q$ | $1-x$ | $2 x$ | $=1+x$ |

Partiol Pressure $P_{A}=\frac{1-x}{1+x} \times P_{2} P_{B}=\frac{2 x}{1+x} \times P_{2}$
$\left.\mathrm{Kp}_{1}=\frac{\left(\frac{x \mathrm{P}_{1}}{1+\mathrm{x}}\right)\left(\frac{\mathrm{xP}}{1}\right.}{1+\mathrm{x}}\right)$
$K p_{2}=\frac{(2 x)^{2} \times P_{2}{ }^{2}}{\left(\frac{1-x}{1+x}\right) P_{2}}$
$\frac{K P_{1}}{K P_{2}}=\frac{3}{1}=\frac{\mathrm{P}_{1}}{4 \mathrm{P}_{2}}$
$\frac{\mathrm{P}_{1}}{\mathrm{P}_{2}}=\frac{12}{1}$

Thus the value of $x$ is 12 .
22. The correct answer is [2].
(A) $\lambda=\frac{h}{m v}=\frac{6 \times 10^{-34}}{9 \times 10^{-31} \times 1000}=666.7 \times 10^{-9} \mathrm{~m}$
(C) $=666.67 \mathrm{~nm}$

The cathode ray start from cathode and move towards anode.
23. The correct answer is [15].

The concentration of $B$ is four times of $A$.

$$
\therefore \quad[B]=4[A]
$$

After 15 min , the concentration of A will be:

$$
[A]_{\text {final }}=\frac{[A]}{2}
$$

The concentration of $B$ will be

$$
\begin{aligned}
& \left.[B]_{\text {final }}=\frac{4[A]}{2}=2[A] \text { (after } 5 \text { minutes }\right) \\
& {[B]_{\text {final }}=\frac{2[A]}{2}={ }_{[A]}^{(\text {after } 5 \text { minutes i.e., }}}
\end{aligned}
$$

(after 5 minutes i.e., 10 min )

$$
[B]_{\text {final }}=\frac{[A]}{2}(\text { after } 5 \text { minutes i.e., } 15 \mathrm{~min})
$$

Total time $=5+5+5=15 \mathrm{~min}$
24. The correct answer is [12].

Bromic acid is $\mathrm{HBrO}_{3}$. The bromine is in +5 oxidation state. Perbromic acid is $\mathrm{HBrO}_{4}$. The oxidation state of bromine is +7 . The summation is $(7+5)=12$
25. The correct answer is [3].

Millimoles of $\mathrm{KCl}=$ MilliMoles of $\mathrm{AgNO}_{3}$
$\therefore \quad 25 \mathrm{~mL} \times \mathrm{M}=20 \mathrm{~mL} \times 1$
$\therefore \quad \mathrm{M}=0.8$

$$
\Delta \mathrm{T}_{f}=i \times \mathrm{K}_{f} \times \text { Molalilty }
$$

$\Delta \mathrm{T}_{\mathrm{f}}=2 \times 2 \times 0.8=3.2 \approx 3$ (For complete ionization, $i=2, \mathrm{~d}=1 \mathrm{~g} / \mathrm{mL}$, Molarity $=$ molality )
26. The correct answer is [499].

Taking arithmetic mean of (i) and (iii) and eliminating (ii) from it we get the desired equation.

$$
\Delta_{r} H=\frac{78+436}{2}-(-242)=499 \mathrm{~kJ}
$$

27. The correct answer is [3].

The reduction reaction of $\mathrm{MnO}_{4}{ }^{-}$in acidic medium is:

$$
\mathrm{MnO}_{4}^{-}+8 \mathrm{H}^{+}+5 \mathrm{e} \rightarrow \mathrm{Mn}^{2+}+4 \mathrm{H}_{2} \mathrm{O}
$$

As per Nernst Equation:

$$
\begin{aligned}
& \mathrm{E}_{\text {cell }}=E_{\text {cell }}^{\circ}-\frac{0.059}{n} \log \frac{\left[\mathrm{Mn}^{2+}\right]}{\left[\mathrm{MnO}_{4}^{-}\right]\left[H^{+}\right]^{8}} \\
& 1.282=1.54-\frac{0.059}{5} \log \frac{\left[10^{-3}\right]}{\left[10^{-1}\right]\left[H^{+}\right]^{8}} \\
& \therefore \quad p H=2.98 \approx 3
\end{aligned}
$$

28. The correct answer is [364].

$$
\begin{aligned}
\text { Molality } & =\frac{(\text { Molarity }) \times 1000}{(d \times V)-(M \times \text { Mol.Mass })} \\
& =\frac{3 \times 1000}{(1000 \times 1)-(3 \times 58.5)} \\
& =3.64=364 \times 10^{-2}
\end{aligned}
$$

29. The correct answer is [2].

- Compound does not get dissolve in NaOH nor in HCl . Hence, there is no acidic or basic group respectively present in the compound.
- Compound does not form precipitates with 2,4-DNP which indicates the absence of the carbonyl group.
- The compound $\mathrm{C}_{9} \mathrm{H}_{10} \mathrm{O}$ has $\mathrm{D} . \mathrm{U}=5$ which on hydrogenation produces $\mathrm{C}_{9} \mathrm{H}_{12} \mathrm{O}$ with D.U $=4$. Hence, there is one C-C double bond in the chain that gets hydrogenated. The presence of double bond can have the possible two isomers cis- and trans-isomers.

30. The correct answer is [2].

Where POS = Plane of symmetry.
COS = Center of symmetry.
