## JEE (Main) CHEMISTRY SOLVED PAPER

## Section A

1. Match list I with list II

| List I | List II |
| :--- | :--- |
| (A) Nitrogen oxides in <br> air | I. Eutrophication |
| (B) Methane in air | II. pH of rain water <br> becomes 5.6 |
| (C) Carbon dioxide | III. Global warming |
| (D) phosphate fertilisers <br> in water | IV. Acid rain |

Choose the correct answer from the options given below:
(1) A-IV, B-III, C-II, D-I
(2) A-I, B-II, C-III, D-IV
(3) A-II, B-III, C-I, D-IV
(4) A-IV, B-II, C-III, D-I
2.

$A$ in the above reaction is:
(1)

(2)

(3)

(4)

3. In the given reaction cycle

$\mathrm{X}, \mathrm{Y}$ and Z respectively are
(1) $\mathrm{X}-\mathrm{CaO}, \mathrm{Y}-\mathrm{NaCl}+\mathrm{CO}_{2}, \mathrm{Z}-\mathrm{NaCl}$
(2) $\mathrm{X}-\mathrm{CaCO}_{3}, \mathrm{Y}-\mathrm{NaCl}, \mathrm{Z}-\mathrm{HCl}$
(3) $\mathrm{X}-\mathrm{CaO}_{3}, \mathrm{Y}-\mathrm{NaCl}, \mathrm{Z}-\mathrm{KCl}$
(4) $\mathrm{X}-\mathrm{CaO}, \mathrm{Y}-\mathrm{NaCl}+\mathrm{CO}_{2}, \mathrm{Z}-\mathrm{KCl}$
4. Given below are two statements:

Statement I: $\mathrm{SbCl}_{5}$ is more covalent than $\mathrm{SbCl}_{3}$
Statement II: The higher oxides of halogens also tend to be more stable than lower ones.
In the light of the above statements, choose the most appropriate answer from the options given below
(1) Statement I is correct but statement II is incorrect
(2) Both statement I and statement II are incorrect
(3) Both statement I and statement II are correct
(4) Statement I is incorrect but statement II is correct
5. A metal chloride contains $55.0 \%$ of chlorine by weight. 100 mL vapours of the metal chloride at STP Weight 0.57 g . The molecular formula of the metal chloride is (Given: Atomic mass of chlorine is 35.5 u )
(1) MCl
(2) $\mathrm{MCl}_{3}$
(3) $\mathrm{MCl}_{2}$
(4) $\mathrm{MCl}_{4}$
6. Four gases A, B, C and D have critical temperature $5.3,33.2,126.0$ and 154.3 K respectively. For their adsorption on a fixed amount of charcoal, the correct order is:
(1) D $>$ C $>$ B $>$ A
(2) C $>$ B $>$ D $>$ A
(3) D $>$ C $>$ A $>$ B
(4) $\mathrm{C}>$ D $>$ B $>$ A
7. The bond order and magnetic property of acetylide ion are same as that of
(1) $\mathrm{N}_{2}{ }^{+}$
(2) $\mathrm{O}_{2}{ }^{+}$
(3) $\mathrm{NO}^{+}$
(4) $\mathrm{O}_{2}^{-}$
8. For lead storage battery pick the correct statements
A. During charging of battery, $\mathrm{PbSO}_{4}$ on anode is converted into $\mathrm{PbO}_{2}$
B. During charging of battery, $\mathrm{PbSO}_{4}$ on cathode is converted into $\mathrm{PbO}_{2}$
C. Lead storage battery consists of grid of lead packed with $\mathrm{PbO}_{2}$ as anode
D. Lead storage battery has $\sim 38 \%$ solution of sulphuric acid as an electrolyte
Choose the correct answer from the options given below:
(1) B, D only
(2) B, C only
(3) B, C, D only
(4) A,B,D only
9. Match List I with List II

| LIST-I <br> Complex | LIST-II <br> CFSE ( $\Delta_{0}$ ) |
| :--- | :--- |
| (A) $\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}$ | I. -0.6 |
| $(\mathrm{~B})\left[\mathrm{Ti}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{3+}$ | II. -2.0 |
| $(\mathrm{C})\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]^{3-}$ | III. -1.2 |
| $(\mathrm{D})\left[\mathrm{NiF}_{6}\right]^{4-}$ | IV. -0.4 |

Choose the correct answer from the options given below:
(1) A-III, B-IV, C-I, D-II
(2) A-II, B-III, C-I, D-IV
(3) A-I, B-IV, C-II, D-III
(4) A-I, B-II, C-IV, D-III
10. The density of alkali metals is in the order
(1) $\mathrm{Na}<\mathrm{K}<\mathrm{Cs}<\mathrm{Rb}$
(2) $\mathrm{K}<\mathrm{Na}<\mathrm{Rb}<\mathrm{Cs}$
(3) $\mathrm{Na}<\mathrm{Rb}<\mathrm{K}<\mathrm{Cs}$
(4) $\mathrm{K}<\mathrm{Cs}<\mathrm{Na}<\mathrm{Rb}$
11. Match List I with List II

| LIST I <br> Type of Hydride | LIST II <br> Example |
| :--- | :--- |
| (A) Electron deficient hydride | I. $\mathrm{MgH}_{2}$ |
| (B) Electron rich hydride | II. HF |
| (C) Electron precise hydride | III. $\mathrm{B}_{2} \mathrm{H}_{6}$ |
| (D) Saline hydride | IV. $\mathrm{CH}_{4}$ |

Choose the correct answer from the options given below:
(1) A-II, B-III, C-IV, D-I (2) A-III, B-II, C-IV, D-I
(3) A-II, B-III, C-I, D-IV (4) A-III, B-II, C-I, D-IV
12. Match List I with List II

| LIST-I <br> (Examples ) | LIST-II <br> (Type) |
| :--- | :---: |
| (A) 2-Chloro-1, <br> 3-butadiene | I.Biodegradable <br> polymer <br> (B) Nylon 2-nylon 6II. Synthetic <br> Rubber |
| (C) Polyacrylonitrile | III. Polyester |
| (D) Dacron | IV. Addition <br> Polymer |

Choose the correct answer from the options given below:
(1) A-IV, B-I, C-III, D-II (2)A-II, B-IV, C-I, D-III
(3) A-II, B-I, C-IV, D-III (4)A-IV, B-III, C-I, D-II
13. Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason R
Assertion A: In the Ellingham diagram, a sharp change in slope of the line is observed for $\mathrm{Mg} \rightarrow \mathrm{MgO}$ at $\sim 1120^{\circ} \mathrm{C}$
Reason R: There is a large change of entropy associated with the change of state
In the light of the above statements, choose the correct answer from the options given below
(1) Both A and R are true but R is NOT the correct explanation of A
(2) $A$ is false but $R$ is true
(3) $A$ is true but $R$ is false
(4) Both $A$ and $R$ are true and $R$ is the correct explanation of A
14. The incorrect statement regarding the reaction given below is

(1) The product ' B ' formed in the above reaction is p-nitroso compound at low temperature
(2) ' B ' is N-nitroso ammonium compound
(3) The electrophile involved in the reaction is $\mathrm{NO}^{+}$
(4) The reaction occurs at low temperature
15. The major product ' $P$ ' formed in the following sequence of reactions is

(iii) $\mathrm{LiAlH}_{4}$
(iv) $\mathrm{H}_{3} \mathrm{O}^{+}$
(1)

(2)

(3)

(4)

16. Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason R
Assertion A: $5 f$ electrons can participate in bonding to a far greater extent than $4 f$ electrons
Reason R: 5f orbitals are not as buried as $4 f$ orbitals In the light of the above statements, choose the correct answer from the options given below
(1) Both $A$ and $R$ are true and $R$ is the correct explanation of A
(2) Both A and R are true but R is NOT the correct explanation of A
(3) $A$ is true but $R$ is false
(4) $A$ is false but $R$ is true
17. In the following reaction

(1)

(2)

(3)

(4)

18. Given below are two statements:

Statement I: Boron is extremely hard indicating its high lattice energy
Statement II: Boron has highest melting and boiling point compared to its other group members.
In the light of the above statements, choose the most appropriate answer from the options given below
(1) Both Statement I and Statement II are incorrect
(2) Statement I is incorrect but Statement II is correct
(3) Statement I is correct but Statement II is incorrect
(4) Both statement I and Statement II are correct
19. Correct statements for the given reaction are :

(A) Compound ' $B$ ' is aromatic
(B) The completion of above reaction is very slow
(C) 'A' shows tautomerism
(D) The bond lengths of C-C in compound B are found to be same
Choose the correct answer from the options given below:
(1) $A, B$ and C only
(2) A, C and D only
(3) B, C and D only
(4) A, B and D only
20. 2-hexene $\xrightarrow[\text { (ii) } \mathrm{H}_{2} \mathrm{O}]{\text { (i) } \mathrm{O}_{3}}$ Products

The two products formed in above reaction are -
(1) Butanal and acetaldehyde
(2) Butanal and acetic acid
(3) Butanoic acid and acetaldehyde
(4) Butanoic acid and acetic acid

## Section B

21. 

The value of $x$ in compound ' $D$ ' is
22. The reaction $2 \mathrm{NO}+\mathrm{Br}_{2} \rightarrow 2 \mathrm{NOBr}$ takes places through the mechanism given below:
$\mathrm{NO}+\mathrm{Br}_{2} \rightleftharpoons \mathrm{NOBr}_{2}$ (fast)
$\mathrm{NOBr}_{2}+\mathrm{NO} \rightarrow 2 \mathrm{NOBr}$ (slow)
The overall order of the reaction is $\qquad$ .
23. At 600 K , the root mean square ( rms ) speed of gas $X$ (molar mass $=40$ ) is equal to the most probable speed of gas Y at 90 K . The molar mass of the gas Y is $\qquad$ $\mathrm{gmol}^{-1}$.( Nearest integer)
24. An analyst wants to convert 1 LHCl of $\mathrm{pH}=1$ to a solution of HCl of pH 2 . The volume of water needed to do this dilution is $\qquad$ mL . (Nearest integer)
25. In an oligopeptide named Alanylglycylphenyl alanyl isoleucine, the number of $\mathrm{sp}^{2}$ hybridised carbons is
26. 80 mole percent of $\mathrm{MgCl}_{2}$ is dissociated in aqueous solution. The vapour pressure of 1.0 molal aqueous solution of $\mathrm{MgCl}_{2}$ at $38^{0}$ is $\qquad$ mmHg . (Nearest integer)
Given: Vapour pressure of water at $38^{\circ} \mathrm{C}$ is 50 mm Hg.
27. Three organic compounds $\mathrm{A}, \mathrm{B}$ and C were allowed to run in thin layer chromatography using hexane and gave the following result (see figure). The $\mathrm{R}_{\mathrm{f}}$ value of the most polar compound is $\qquad$ $\times 10^{-2}$

28. One mole of an ideal gas at 350 K is in a 2.0 L vessel of thermally conducting walls, which are in contact with the surroundings. It undergoes isothermal reversible expansion from 2.0 L to 3.0 L against a constant pressure of 4 atm . The change in entropy of the surroundings $(\Delta S)$ is $\qquad$ $\mathrm{JK}^{-1}$ (Nearest integer)
Given: $\mathrm{R}=8.314 \mathrm{~J} \mathrm{~K}^{-1} \mathrm{~mol}^{-1}$
29. Values of work function $\left(W_{0}\right)$ for a few metals are given below

| Metal | Li | Na | K | Mg | Cu | Ag |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{W}_{\mathrm{o}} / \mathrm{eV}$ | 2.42 | 2.3 | 2.25 | 3.7 | 4.8 | 4.3 |

The number of metals which will show photoelectric effect when light of wavelength 400 nm falls on it is
Given: $\mathrm{h}=6.6 \times 10^{-34} \mathrm{Js}$
30. The mass of $\mathrm{NH}_{3}$ produced when 131.8 kg of cyclohexanecarbaldehyde undergoes Tollen's test is $\qquad$ kg. (Nearest Integer)
Molar Mass of $\mathrm{C}=12 \mathrm{~g} / \mathrm{mol}$
$\mathrm{N}=14 \mathrm{~g} / \mathrm{mol}$
$\mathrm{O}=16 \mathrm{~g} / \mathrm{mol}$

## Answer Key

| Q. No. | Answer | Topic name | Chapter name |
| :---: | :---: | :---: | :---: |
| 1 | (1) | Air and Water Pollution | Environmental Chemistry |
| 2 | (1) | Nucleophilic addition Reaction | Aldehyde and Ketones |
| 3 | (2) | Chemical reactions of substance | s Block Elements |
| 4 | (3) | Covalent character of compounds | Chemical Bonding |
| 5 | (3) | Molecular Formula of the Substance | Some Basic Concepts of Chemistry |
| 6 | (1) | Relationship Between the Critical Temperature and Adsorption | Surface Chemistry |
| 7 | (3) | Relationship Between Bond Order and Magnetic Moment | Chemical Bonding |
| 8 | (1) | Charging and discharging reaction of Lead Storage Battery | Electro Chemistry |
| 9 | (3) | CFSE Value of Various Coordination Compounds | Coordination Chemistry |
| 10 | (2) | Comparison of Densities of Metals | s Block |
| 11 | (2) | Classification of Metals Hydrides | Hydrogen |
| 12 | (3) | Classification of Polymer | Polymer |
| 13 | (4) | Ellingham Diagram | Metallurgy |
| 14 | (2) | Chemical properties of aniline | Amines |
| 15 | (1) | Nucleophilic Acyl Substitution | Aldehyde and Ketones |
| 16 | (1) | Property of f Block Elements | d and f Block |
| 17 | (1) | Nucleophilic Addition Reaction of Grignard Reagent | Aldehyde and Ketones |
| 18 | (4) | Abnormal Behaviour of Boron Atom | p Block |
| 19 | (2) | Acid Base Reaction of Organic Acids | General Organic Chemistry |
| 20 | (4) | Oxidative Ozonolysis of Alkene | Hydrocarbon |
| 21 | [15] | Mixed reactions of Carbonyl Compounds | Aldehyde and Ketones |
| 22 | [3] | Calculation of finding order of Reaction | Chemical Kinetics |
| 23 | [4] | Calculation to find Molar Mass Through Root Mean Square Velocity | States of Matter |
| 24 | [9000] | Dilution Law | Liquid Solution |
| 25 | [10] | Calculation of Number of Atoms in a given Peptides | Biomolecules |
| 26 | [48] | Lowering of Vapour Pressure | Liquid Solution |
| 27 | [25] | $\mathrm{R}_{\mathrm{f}}$ Value | Some Basic Concepts of Chemistry |
| 28 | [3] | Entropy change Calculation | Thermodynamics and Thermochemistry |
| 29 | [3] | Photo Electric Effect | Structure of Atom |
| 30 | [60] | Stoichiometry relationship | Some Basic Concepts of Chemistry |

## Solutions

## Section A

1. Option (1) is correct.

## List I

A. Nitrogen oxides in air
B. Methane in air
C. Carbon dioxide
D. Phosphate fertilizer in water.

## List II

IV. Acid rain
III. Global warming
II. pH of rain water becomes 5.6
I. Eutrophication
2. Option (1) is correct.

Here $\mathrm{EtO}^{-}$reacts as a base to abstract H -atom to obtain carbanion which act as a nucleophile to attack on carbonyl group to obtain $\alpha, \beta$ unsaturated carbonyl group.
3. Option (2) is correct.
$\mathrm{CaCl}_{2}+\mathrm{Na}_{2} \mathrm{CO}_{3} \rightarrow \underset{\mathrm{x}}{\mathrm{CaCO}_{3}}+\underset{\mathrm{Y}}{2 \mathrm{NaCl}^{2}}$
$\mathrm{CaCO}_{3}+2 \underset{\mathrm{Z}}{\mathrm{HCl}} \rightarrow \mathrm{CaCl}_{2}+\mathrm{CO}_{2}+\mathrm{H}_{2} \mathrm{O}$
Here formation of $\mathrm{CaCO}_{3}$ and NaCl takes place on reaction of $\mathrm{CaCl}_{2}$ and $\mathrm{Na}_{2} \mathrm{CO}_{3}$.
The reaction of $\mathrm{CaCO}_{3}$ and HCl is an acid base reaction to form salt, $\mathrm{CO}_{2}$ and $\mathrm{H}_{2} \mathrm{O}$.
4. Option (3) is correct.
(I) is correct, $\mathrm{SbCl}_{5}$ is more covalent than $\mathrm{SbCl}_{3}$ because $\mathrm{Sb}^{5+}$ has higher effective nuclear charge compared to $\mathrm{Sb}^{3+}$ and according to fajan's rule smaller cation has higher covalent character due to higher value of polarizing power.
(II) is also correct.

Due to the presence of higher oxidation state, the reactivity of the halogen oxide decreases which makes it more stable than the lower one.
5. Option (3) is correct.

Given at STP
100 ml vapours of metal chloride weigh 0.57 gm so
22400 ml vapours of metal chloride weigh
$=\frac{0.57 \mathrm{gm} \times 22700 \mathrm{ml}}{100 \mathrm{ml}}=129.40 \mathrm{gm}$
$\%$ of $\mathrm{Cl}=\frac{\text { mass of chlorine }}{\text { molar mass of metal chloride }} \times 100$
$55=\frac{\text { mass of chlorine }}{129.40} \times 100$
Mass of chlorine $=71.1 \mathrm{gm}$
Mole of chlorine $=\frac{71.1}{35.5}=2$
Hence formula of metal chloride $=\mathrm{MCl}_{2}$
6. Option (1) is correct.

The extent of adsorption of gas on a fixed amount of charcoal is directly related with the critical temp because higher the critical temp, easier will be the liquefaction of gas.

| Gas | Critical temperature |  |
| :--- | :---: | :--- |
| A | 5.3 K |  |
| B | 33.2 K | Adsorption |
| C | 126 K | increases |
| D | 154.3 K | $\downarrow$ |

So, decreasing order of adsorption of gas-
D $>C>B>A$
7. Option (3) is correct.

Here the bond order of $\mathrm{H}-\mathrm{C} \equiv \mathrm{C}^{-}$is 3.0
The bond order of ${ }^{+} \mathrm{NO}$ is 3.0
The number of electron present in ${ }^{+} \mathrm{NO}$ and $\mathrm{H}-\mathrm{C} \equiv \mathrm{C}^{-}$is 14 and both are diamagnetic in nature as they both do not contain unpaired $\mathrm{e}^{-}$
8. Option (1) is correct.

Lead storage battery consists of lead anode and a grid of lead packed with lead oxides $\left(\mathrm{PbO}_{2}\right)$ as cathode, a $38 \%$ solution of $\mathrm{H}_{2} \mathrm{SO}_{4}$ is used as an electrolyte.
When battery is in use both $\mathrm{Pb} \& \mathrm{PbO}_{2}$ reacts with $\mathrm{H}_{2} \mathrm{SO}_{4}$ to give $\mathrm{PbSO}_{4}$.
$\mathrm{Pb}(\mathrm{s})+\mathrm{PbO}_{2}(\mathrm{~s})+2 \mathrm{H}_{2} \mathrm{SO} 4(\mathrm{aq}) \rightarrow 2 \mathrm{PbSO}_{4}(\mathrm{~s})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$
On charging the battery, the reaction is reversed \& $\mathrm{PbSO}_{4}$ on anode and cathode is converted into Pb and $\mathrm{PbO}_{2}$ respectively.

$$
2 \mathrm{PbSO}_{4}(\mathrm{~s})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \mathrm{Pb}(\mathrm{~s})+\mathrm{PbO}_{2}(\mathrm{~s})+2 \mathrm{H}_{2} \mathrm{SO}_{4}(\mathrm{aq})
$$

So, statement B and D is correct.
9. Option (3) is correct.

In $\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}$ complex, oxidation state of copper is +2 i.e, $\mathrm{Cu}^{2+}$
$\mathrm{Cu}(\mathrm{z}=29)-3 \mathrm{~d}^{10} 4 \mathrm{~s}^{1}$
$\mathrm{Cu}^{2+}-3 d^{9} 4 \mathrm{~s}^{0}$

$\operatorname{CFSE}\left(\Delta_{0}\right)=-0.4 \times 6+3 \times+0.6+\times \mathrm{P}$
$=-2.4+1.8=-0.6$
In $\left[\mathrm{Ti}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{3+}$ complex, the oxidation state of metal is +3 , i.e, $\mathrm{Ti}^{3+}$
$\mathrm{Ti}(\mathrm{z}=22)-3 \mathrm{D}^{2} 4 \mathrm{~s}^{2}$
$\mathrm{Ti}^{+} \quad-3 \mathrm{~d}^{1} 4 \mathrm{~s}^{0}$

$\operatorname{CFSE}\left(\Delta_{0}\right)=-0.4 \times 1=-0.4$
In $\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]^{3-}$ complex, the oxidation state of metal is +3 i.e., $\mathrm{Fe}^{3+}$
$\mathrm{Fe}(\mathrm{z}=26)-3 \mathrm{~d}^{6} 4 \mathrm{~s}^{2}$
$\mathrm{Fe}^{3+} \quad-3 \mathrm{~d}^{5} 4 \mathrm{~s}^{0}$

$\operatorname{CFSE}\left(\Delta_{0}\right)=-0.4 \times 5=-2.0$
In $\left[\mathrm{NiF}_{6}\right]^{4}$ the oxidation state of metal is +2 i.e., $\mathrm{Ni}^{2+}$
$\mathrm{Ni}(\mathrm{z}=28)-3 \mathrm{~d}^{8} 4 \mathrm{~s}^{2}$
$\mathrm{Ni}^{+2}-3 \mathrm{~d}^{8}$

$\operatorname{CFSE}\left(\Delta_{0}\right)=-0.4 \times 6+0.6 \times 2$
$-2.4+1.2=-1.2$
From above the final answer is
A. $\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}$
I. -0.6
B. $\left[\mathrm{Ti}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{3+}$
II. -0.4
C. $\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]^{3-}$
III. -2.0
D. $\left[\mathrm{NiF}_{6}\right]^{4}$
IV. -1.2

Correct answer is A-1, B-IV, C-II, D-III
10. Option (2) is correct.

Mostly density of the substance increase down the group. The density of alkali metal do not follow the regular trend. The density of the alkali metal is

$$
\mathrm{K}<\mathrm{Na}<\mathrm{Rb}<\mathrm{Cs}
$$

Here the volume of potassium is extra due to the presence of vacant 3d-orbital.
11. Option (2) is correct.

Type of hydride
A. electron deficient hydride
B. electron rich hydride
C. electron precise hydride
D. saline hydride
12. Option (3) is correct.

List-I
Examples
A. 2-chlolro-1,3-butadiene
B. Nylon-2,6
C. Polyacrylonitrile
D. Dacron
13. Option (4) is correct.

In the Ellingham diagram, a sharp change in slope of the line is observed for $\mathrm{Mg} \rightarrow \mathrm{MgO}$ at $1120^{\circ} \mathrm{C}$ which show change in the physical state of the substance so Assertion is correct.
Reason is also correct,
The sharp change is observed due to the change in physical state of the substance. As a result, entropy change becomes positive.
14. Option (2) is correct.

Option 3 and 4 is correct, as $\mathrm{NO}^{\oplus}$ is an electrophile which forms at low temperature.

P-nitroso-N,N-dimethyl aniline

Option (I) is also correct
Here the option 2 is not correct because we do not obtain N-nitroso ammonium compound.
15. Option (1) is correct.

The reaction is nucleophillic acyl substitution reaction

The reaction is nucleophillic acyl substitution reaction

Here reduction of $-\underset{\substack{\| \\ \hline}}{\mathrm{C}-\mathrm{NHR} \text { group takes place into }}$ $-\mathrm{CH}_{2}-\mathrm{NHR}$ in the presence of $\mathrm{LiAlH}_{4} / \mathrm{H}_{3} \mathrm{O}^{+}$
16. Option (1) is correct.

Both Assertion and Reason are correct
$5 f \mathrm{e}^{-}$can participate in bonding to a far greater extent than 4 f electrons because they are not as buried as 4 f orbitals although the 5 f orbitals resembles the 4 f orbitals in their angular part of the wave function
17. Option (1) is correct.

Formation of Grignard reagent takes place which acts as a nucleophile for the some molecule to form a tertiary alcohol.

18. Option (4) is correct.

Statement I is correct
Due to smaller size of boron atom boron is extremely hard and due to which its lattice energy is high.
Statement II is correct
Due to small size and high charge density boron atom show abnormal behavior with the other member of group. Its melting and bling point is
also high as compared to the other member of group.
19. Option (2) is correct.

(A)

(B)

The compound (B) is aromatic in nature because it follow huckel rule aromaticity. It contains $6 \pi \mathrm{e}^{-}$and it is cyclic, planar and have complete conjugation. It also shows tautomerism to form keto-enol compound.
The reaction is very fast because it is an example of acid-base reaction.
Due to the presence of conjugation, the bond length of C-C bond is same in throughout the molecules.
20. Option (4) is correct.

The oxidative ozonolysis of alkene gives rise to the formation of alkanoic acid

## Section B

## 21. Correct answer is [15].

Molecular formula of the above compound is $\mathrm{C}_{15} \mathrm{H}_{19} \mathrm{NO}_{4} \mathrm{I}_{2}$
Here the value of $x=15$
22. Correct answer is [3].

Given $\mathrm{NO}+\mathrm{Br}_{2} \rightleftharpoons \mathrm{NOBr}_{2}$ (fast)

$$
\begin{equation*}
\mathrm{NOBr}_{2}+\mathrm{NO} \rightarrow 2 \mathrm{NOBr} \text { (slow) } \tag{1}
\end{equation*}
$$

For slow step rate $=\mathrm{K}\left[\mathrm{NOBr}_{2}\right][\mathrm{NO}]$
In the rate low expression, reaction intermediate never participates $\therefore$ we have to replace the intermediate with the reactant or product.
The intermediate appear in the fast step so form the fast step.
$\mathrm{K}_{\mathrm{eq}}=\frac{[\mathrm{NOBr}}{2}$ ]
$\operatorname{Or}\left[\mathrm{NOBr}_{2}\right]=\operatorname{Keq}[\mathrm{NO}]\left[\mathrm{Br}_{2}\right]$
Put the value of $\mathrm{NOBr}_{2}$ from (2) to (1)
Rate $=\mathrm{K}[\mathrm{NO}] \times \mathrm{K}_{\mathrm{eq}}[\mathrm{NO}]\left[\mathrm{Br}_{2}\right]$
$=K . K_{\text {eq }}\left[\mathrm{NO}^{2}\right]^{\left[\mathrm{Br}_{2}\right]}$
Or Rate $=\mathrm{K}^{1}[\mathrm{NO}]^{2}\left[\mathrm{Br}_{2}\right]$
Where $K^{1}=K^{\prime} . K_{\text {eq }}$
From above the overall order is (3)
With respect to NO, order $=2$
With respect to $\mathrm{Br}_{2}$, order $=1$
23. Correct answer is [4].
$\mu_{\mathrm{rms}}=\sqrt{\frac{3 \mathrm{RT}}{\mathrm{M}}} \quad$ where $\mathrm{M}=40$

$$
\begin{equation*}
\mathrm{T}=600 \mathrm{k} \tag{1}
\end{equation*}
$$

$\mu_{\mathrm{rms}}=\sqrt{\frac{3 \mathrm{R} \times 600}{40}}$
$\mu_{\mathrm{mp}}=\sqrt{\frac{2 \mathrm{RT}}{\mathrm{M}}}$
Where $\mathrm{T}=90 \mathrm{k}$
$\mathrm{M}=$ ?
$\mu_{\mathrm{mp}}=\sqrt{\frac{2 \mathrm{R} \times 90}{\mathrm{M}}}$
Given $\mu_{\mathrm{rms}}=\mu_{\mathrm{mp}}$
From (1) \& (2)
$\sqrt{\frac{3 \mathrm{R} \times 600}{40}}=\sqrt{\frac{2 \mathrm{R} \times 90}{\mathrm{M}}}$
$\frac{1800 \mathrm{R}}{40}=\frac{180 \mathrm{R}}{\mathrm{M}}$
$\mathrm{M}=\frac{180 \mathrm{R} \times 40}{1800 \mathrm{R}}$
$\mathrm{M}=4 \mathrm{gm} \mathrm{mol}^{-1}$
24. Correct answer is [9000].

| Given $\mathrm{pH}=1$ | $\left[\mathrm{H}^{+}\right]=10^{-1} \mathrm{M}$ |
| :--- | :--- |
|  | $\mathrm{V}=1 \mathrm{~L}$ |
| $\mathrm{pH}=2$ | $\left[\mathrm{H}^{+}=10^{-2} \mathrm{M}\right.$ |
|  | $\mathrm{V}=?$ |

From $\mathrm{M}_{1} \mathrm{~V}_{1}=\mathrm{M}_{2} \mathrm{~V}_{2}$ (dilution law)
$10^{-1} \times 1 \mathrm{~L}=10^{-2} \mathrm{M} \times \mathrm{V}(\mathrm{L})$
$\mathrm{V}(\mathrm{L})=10 \mathrm{~L}$

Final volume $=10 \mathrm{~L}$
Amount of water needed $=($ final-initial)volume
$=10 \mathrm{~L}-1 \mathrm{~L}$
$=9 \mathrm{~L}$
$=9000 \mathrm{~mL}$
25. Correct answer is [10].

Given oligopeptide is
Alanyl glycyl phenylalanyl isoleucine
On the hydrolysis of above oligopeptide we got

Alanine
Glycine
$\mathrm{H}_{2} \mathrm{~N}-\mathrm{CH}_{2}-\mathrm{COOH}$

Number of $\mathrm{sp}^{2}$ hybridised carbon-
In alanine - (1)
In glycine - (1)
In phenyl alanine - (7)
In Isoleucine - $\frac{1}{10}$
26. Correct answer is [48].

Given $\mathrm{MgCl}_{2} \rightarrow \mathrm{Mg}^{2+}+2 \mathrm{Cl}^{-}$

| Initial | 1 | - | - |
| :--- | :--- | :--- | :--- |
| Change | $-\alpha$ | $+\alpha$ | $+2 \alpha$ |
| Final | $1-\alpha$ | $\alpha$ | $2 \alpha$ |

Total no. of particle (i) $=1-\alpha+\alpha+2 \alpha=1+2 \alpha$ $=1+2 \alpha$
Given ( $\alpha=0.8$ )
So $i=1+2 \times 0.8=2.6$
from $\frac{\Delta \mathrm{P}}{\mathrm{P}^{0}}=\frac{i \times n_{2}}{n_{1}}$
$i=2.6, \mathrm{P}^{\circ}=50 \mathrm{~mm} \mathrm{Hg}, n_{2}=1 \mathrm{~mole}, n_{1}=55.5 \mathrm{~mol}$
$\Delta \mathrm{P}=\frac{i \times n_{2} \times \mathrm{P}^{\circ}}{55.5}=\frac{2.6 \times 50 \times 1}{55.5}=2.34 \mathrm{mmHg}$
As $\Delta \mathrm{P}=\mathrm{P}^{\circ}-\mathrm{Ps}=50-2.34=47.66$
$\approx 48 \mathrm{~mm} \mathrm{Hg}$
27. Correct answer is [25].

The $\mathrm{R}_{f}$ value of most polar compound is-
$\mathrm{R}_{f}=\frac{\text { Distance covered by compound }}{\text { Distance covered by solvent }}=\frac{2}{8}=0.25$
or $\mathrm{R}_{f}=25 \times 10^{-2}$
28. Correct answer is [3].

From $\Delta \mathrm{S}_{\text {system }}=n R \ln \left(\frac{\mathrm{~V}_{2}}{\mathrm{~V}_{1}}\right)$
Given $\mathrm{n}=1$ mole

$$
\begin{aligned}
\mathrm{R} & =8.314 \mathrm{JK}^{-1} \mathrm{~mol}^{-1} \\
\mathrm{~V}_{1} & =2 \mathrm{~L}, \mathrm{~V}_{2}=3 \mathrm{~L} \\
\Delta \mathrm{~S}_{\text {system }} & =1 \times 8.314 \ln \left(\frac{3}{2}\right) \\
\Delta \mathrm{S}_{\text {system }} & =3.37 \\
\text { As } \Delta \mathrm{S}_{\text {system }} & =\Delta \mathrm{S}_{\text {surrounding }} \\
\text { So, } \Delta \mathrm{S}_{\text {surrounding }} & =3.37
\end{aligned}
$$

29. Correct answer is [3].

From $\mathrm{E}=\frac{h c}{\lambda}$
$\mathrm{H}=6.626 \times 10^{-34} \mathrm{Js}$
$\mathrm{C}=3 \times 10^{8} \mathrm{~m} / \mathrm{s}$
$\lambda=400 \mathrm{~nm}=400 \times 10^{-9} \mathrm{~m}$
$\mathrm{E}=\frac{6.626 \times 10^{-34} \mathrm{Js} \times 3 \times 10^{8} \mathrm{~m} / \mathrm{s}}{400 \times 10^{-9} \mathrm{~m}}$
$E=\frac{6.626 \times 3}{4} \times 10^{-9} \mathrm{~J}$
$\mathrm{E}=4.97 \times 10^{-19} \mathrm{~J}$
We know lev $=1.6 \times 10^{-1} \mathrm{~J} \mathrm{~J}$ The carbon atom of benzene and
$\mathrm{E}=\frac{4.97 \times 10^{-19} \mathrm{~J}}{1.6 \times 10^{-19} \mathrm{~J}} \mathrm{eV}$ -C-OH group are $\mathrm{sp}^{2}$
II
O
$\mathrm{E}=3.1 \mathrm{eV}$ hybridized.
Only those metal will show photoelectric effect whose value of work function is less than 3.1 eV from the given value of work function of a few metal only $\mathrm{Li}, \mathrm{Na}$ and K will show photoelectric effect because their work function is less than 3.1 eV .
30. Correct answer is [60].

The reaction between cyclohexane carbaldehyde and tollen's reagent is as follows-

Molar mass of cyclohexane carbaldehyde $\left(\mathrm{C}_{7} \mathrm{H}_{12} \mathrm{O}\right)$
$=12 \times 7+12 \times 1+1 \times 16$
$=84+12+16$
$=112 \mathrm{~g} \mathrm{~mol}^{-1}$
From reaction
112 g Cyclohexane carbaldehyde produces $3 \times 17 \mathrm{~g} \mathrm{NH}_{3}$
So 131.8 kg Cyclohexane carbaldehyde produces
$\frac{3 \times 17 \mathrm{gm} \times 131.8}{112} \mathrm{~kg}=60 \mathrm{~kg}$
Mass of $\mathrm{NH}_{3}$ produced $=60 \mathrm{~kg}$
