## JEE (Main) CHEMISTRY SOLVED PAPER

## Section A

1. Given below are two statements:

Statement I: Permutit process is more efficient compared to the synthetic resin method for the softening of water.
Statement II: Synthetic resin method results in the formation of soluble sodium salts.
In the light of the above statements, choose the most appropriate answer from the options given below:
(1) Both the Statements I and II are correct
(2) Statement I is incorrect but Statement II is correct
(3) Statement I is correct but Statement II is incorrect
(4) Both the Statements I and II are incorrect
2. Which one of the following is most likely a mismatch?
(1) Zinc-Liquation
(2) Copper-Electrolysis
(3) Titanium - van Arkel Method
(4) Nickel-Mond process
3. The energy of an electron in the first Bohr orbit of hydrogen atom is $-2.18 \times 10^{-18} \mathrm{~J}$. Its energy in the third Bohr orbit is $\qquad$ .
(1) $\frac{1}{27}$ of this value
(2) $\frac{1}{9}$ of this value
(3) One third of this value
(4) Three times of this value
4.

In the above reaction, left hand side and right hand side rings are named as ' $A$ ' and ' $B$ ' respectively. They undergo ring expansion. The correct statement for this process is:
(1) Finally both rings will become six membered each.
(2) Ring expansion can go upto seven membered rings
(3) Finally both rings will become five membered each.
(4) Only A will become 6 membered.
5. Match the following

| Column-A | Column-B |
| :--- | :--- |
| (a) Nylon 6 | I. Natural Rubber |
| (b) Vulcanized Rubber | II. Cross Linked |
| (c) cis-1, 4-polyisoprene | III. Caprolactam |
| (d) Polychloroprene | IV. Neoprene |

Choose the correct answer from options given below:
(1) $\mathrm{a} \rightarrow \mathrm{II}, \mathrm{b} \rightarrow \mathrm{III}, \mathrm{c} \rightarrow$ IV, $\mathrm{d} \rightarrow \mathrm{I}$
(2) $\mathrm{a} \rightarrow$ IV, $\mathrm{b} \rightarrow$ III, $\mathrm{c} \rightarrow$ II, d $\rightarrow$ I
(3) $\mathrm{a} \rightarrow$ III, $\mathrm{b} \rightarrow$ II, $\mathrm{c} \rightarrow \mathrm{I}, \mathrm{d} \rightarrow$ IV
(4) $a \rightarrow$ III, $b \rightarrow$ IV, c $\rightarrow$ I, d $\rightarrow$ II
6. What happens when a lyophilic sol is added to a lyophobic sol?
(1) Film of lyophobic sol is formed over lyophilic sol.
(2) Lyophilic sol is dispersed in lyophobic sol.
(3) Lyophobic sol is coagulated.
(4) Film of lyophilic sol is formed over lyophobic sol.
7. In the reaction given below:

ii) KOH Major Product
(1)

(2)

(3)

(4)

8. In the following reaction ' X 'is

(1)

(2)

(3)

(4)

9. 2-Methyl propyl bromide reacts with $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{O}$ - and gives ' A ' whereas on reaction with $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}$ it gives ' B '. The mechanism followed in these reactions and the products ' $A$ ' and ' $B$ ' respectively are:
(1) $\mathrm{S}_{\mathrm{N}} 1, \mathrm{~A}=$ tert-butyl ethyl ether; $\mathrm{S}_{\mathrm{N}} 1, \mathrm{~B}=2$-butyl ethyl ether
(2) $\mathrm{S}_{\mathrm{N}} 2, \mathrm{~A}=2$-butyl ethyl ether; $\mathrm{S}_{\mathrm{N}} 2, \mathrm{~B}=$ iso-butyl ethyl ether
(3) $\mathrm{S}_{\mathrm{N}} 2, \mathrm{~A}=$ iso-butyl ethyl ether; $\mathrm{S}_{\mathrm{N}} 1, \mathrm{~B}=$ tertbutyl ethyl ether
(4) $\mathrm{S}_{\mathrm{N}} 1, \mathrm{~A}=$ tert-butyl ethyl ether; $\mathrm{S}_{\mathrm{N}} 2, \mathrm{~B}=$ isobutyl ethyl ether
10. In the reaction given below:

$\xrightarrow[\text { (ii) } \mathrm{H}^{+}]{\text {(i) } \mathrm{NaOH}, \Delta}{ }^{\prime} \mathrm{A}^{\prime}$
Major Product
' A ' is
(1)

(2)

(3)

(4)

11. D-(+)Glyceraldehyde $\xrightarrow[\substack{\text { ii) } \mathrm{H}_{2} \mathrm{O} / \mathrm{H}^{+} \\ \text {iii) } \mathrm{HNO}_{3}}]{\mathrm{i} \mathrm{H}_{2}}$

The products formed in the above reaction are
(1) Two optically active products
(2) One optically inactive and one meso product.
(3) One optically active and one meso product
(4) Two optically inactive products
12. $\mathrm{CIF}_{5}$ at room temperature is a :
(1) Colourless liquid with square pyramidal geometry
(2) Colourless gas with trigonal bipyramidal geometry
(3) Colourless gas with square pyramidal geometry
(4) Colourless liquid with trigonal bipyramidal geometry
13. The pair of lanthanides in which both elements have high third - ionization energy is:
(1) $\mathrm{Dy}, \mathrm{Gd}$
(2) $\mathrm{Eu}, \mathrm{Gd}$
(3) $\mathrm{Lu}, \mathrm{Yb}$
(4) $\mathrm{Eu}, \mathrm{Yb}$
14. The mismatched combinations are
(A) Chlorophyll - Co
(B) Water hardness - EDTA
(C) Photography - $\left[\mathrm{Ag}(\mathrm{CN})_{2}\right]^{-}$
(D) Wilkinson catalyst - $\left[\left(\mathrm{Ph}_{3} \mathrm{P}\right)_{3} \mathrm{RhCl}\right]$
(E) Chelating ligand - D-Penicillamine

Choose the correct answer from the options given below :
(1) A and C Only
(2) D and E Only
(3) A and E Only
(4) A, C, and E Only
15. Which of the following statements are not correct?
(A) The electron gain enthalpy of F is more negative than that of Cl .
(B) Ionization enthalpy decreases in a group of periodic table.
(C) The electronegativity of an atom depends upon the atoms bonded to it.
(D) $\mathrm{Al}_{2} \mathrm{O}_{3}$ and NO are examples of amphoteric oxides.
Choose the most appropriate answer from the options given below :
(1) A, C and D Only
(2) B and D Only
(3) A, B and D Only
(4) A, B, C and D
16. The radical which mainly causes ozone depletion in the presence of UV radiations is:
(1) $\mathrm{NO}^{\circ}$
(2) $\stackrel{\circ}{\mathrm{OH}}$
(3) $\mathrm{CH}_{3}^{+}$
(4) $\mathrm{Cl}^{\circ}$
17. In which of the following processes, the bond order increases and paramagnetic character changes to diamagnetic one?
(1) $\mathrm{O}_{2} \rightarrow \mathrm{O}_{2}^{+}$
(2) $\mathrm{O}_{2} \rightarrow \mathrm{O}_{2}^{2-}$
(3) $\mathrm{NO} \rightarrow \mathrm{NO}^{+}$
(4) $\mathrm{N}_{2} \rightarrow \mathrm{~N}_{2}^{+}$
18. The incorrect statement from the following for borazine is:
(1) It is a cyclic compound.
(2) It has electronic delocalization.
(3) It can react with water.
(4) It contains banana bonds.
19. Among the following compounds, the one which shows highest dipole moment is
(1)

(2)

(3)

(4)

20. $\mathrm{Be}(\mathrm{OH})_{2}$ reacts with $\mathrm{Sr}(\mathrm{OH})_{2}$ to yield an ionic salt. Choose the incorrect option related to this reaction from the following:
(1) Be is tetrahedrally coordinated in the ionic salt.
(2) The reaction is an example of acid - base neutralization reaction.
(3) The element Be is present in the cationic part of the ionic salt.
(4) Both Sr and Be elements are present in the ionic salt.

## Section B

21. Solution of 12 g of non-electrolyte (A) prepared by dissolving it in 1000 mL of water exerts the same osmotic pressure as that of 0.05 M glucose solution at the same temperature. The empirical formula of A is $\mathrm{CH}_{2} \mathrm{O}$. The molecular mass of A is $\qquad$ g. (Nearest integer)
22. $\mathrm{KMnO}_{4}$ is titrated with ferrous ammonium sulphate hexahydrate in presence of dilute $\mathrm{H}_{2} \mathrm{SO}_{4}$. Number of water molecules produced for 2 molecules of $\mathrm{KMnO}_{4}$ is $\qquad$ -.
23. 20 mL of calcium hydroxide was consumed when it was reacted with 10 mL of unknown solution of $\mathrm{H}_{2} \mathrm{SO}_{4}$. Also 20 mL standard solution of 0.5 MHCl containing 2 drops of phenolphthalein was titrated with calcium hydroxide, the mixture showed pink colour when burette displayed the value of 35.5 mL whereas the burette showed 25.5 mL initially. The concentration of $\mathrm{H}_{2} \mathrm{SO}_{4}$ is $\qquad$ M. (Nearest integer)
24. $t_{87.5}$ is the required for the reaction to undergo $87.5 \%$ completion and $t_{50}$ is the time required for the reaction to undergo $50 \%$ completion. The relation between $t_{87.5}$ and $t_{50}$ for a first order reaction is $\qquad$ $t_{87.5}=x \times t_{50}$. The value of $x$ is $\qquad$ . (Nearest integer)
25. A certain quantity of real gas occupies a volume of $0.15 \mathrm{dm}^{3}$ at 100 atm and 500 K when its compressibility factor is 1.07 . Its volume at 300 atm
and 300 K (When its compressibility factor is 1.4 ) is $\times 10^{-4} \mathrm{dm}^{3}$. (Nearest integer)
26. A metal surface of $100 \mathrm{~cm}^{2}$ area has to be coated with nickel layer of thickness 0.001 mm . A current of 2 A was passed through a solution of $\mathrm{Ni}\left(\mathrm{NO}_{3}\right)_{2}$ for ' $x$ ' seconds to coat the desired layer. The value of $x$ is $\qquad$ . (Nearest integer)
( $\rho_{\mathrm{Ni}}$ (density of Nickel) is $10 \mathrm{~g} \mathrm{~mL}^{-1}$, Molar mass of Nickel is $60 \mathrm{~g} \mathrm{~mol}^{-1} \mathrm{~F}=96500 \mathrm{C} \mathrm{mol}^{-1}$ )
27. 25.0 mL of $0.050 \mathrm{MBa}\left(\mathrm{NO}_{3}\right)_{2}$ is mixed with 25.0 mL of $0.020 \mathrm{M} \mathrm{NaF}^{\mathrm{K}} \mathrm{K}_{\text {sp }}$ of $\mathrm{BaF}_{2}$ is $0.5 \times 10^{-6}$ at 298 K . The ratio of $\left[\mathrm{Ba}^{2+}\right]\left[\mathrm{F}^{-}\right]^{2}$ and $\mathrm{K}_{\text {sp }}$ is $\qquad$ ( Nearest integer)
28. $\mathrm{A}_{2}+\mathrm{B}_{2} \rightarrow 2 \mathrm{AB} . \Delta \mathrm{H}_{\mathrm{f}}^{0}=-200 \mathrm{kJmol}^{-1}$ new line AB , $A_{2}$ and $B_{2}$ are diatomic molecules. If the bond enthalpies of $A_{2}, B_{2}$ and $A B$ are in the ratio 1:0.5:1, then the bond enthalpy of $A_{2}$ is $\qquad$ $\mathrm{kJ} \mathrm{mol}{ }^{-1}$. (Nearest integer)
29. An organic compound gives 0.220 g of $\mathrm{CO}_{2}$ and 0.126 g of $\mathrm{H}_{2} \mathrm{O}$ on complete combustion. If the $\%$ of carbon is 24 then the $\%$ of hydrogen is
$\qquad$ $\times 10^{-1}$ (Nearest integer)
30. For the given reaction

The total number of possible products formed by tertiary carbocation of A is $\qquad$ _.

## Answer Key

| Q. No. | Answer | Topic name | Chapter name |
| :---: | :---: | :--- | :--- |

## Solutions

## Section A

1. Option (4) is correct.

Zeolite process is also known as permutit process. In this sodium aluminum silicate is used for softening of hard water.
Statement I and II are incorrect
Synthetic resins method is more efficient than zeolite process, here cation exchange resins contain large organic molecules with $-\mathrm{SO}_{3} \mathrm{H}$ group are water insoluble.
2. Option (1) is correct.

The metals which have lower value of boiling point are refined by distillation method. Here the boiling point of Zn is low $\therefore$ it is refined through distillation process not by liquation method.
3. Option (2) is correct.

Given, Energy of an electron $=-2.18 \times 10^{-18} \mathrm{~J}$
$\mathrm{E}_{1}=-2.18 \times 10^{-18} \mathrm{~J}$
To find energy of an $\mathrm{e}^{-}$in $3^{\text {rd }}$ orbit $=\mathrm{E}_{3}$
$\mathrm{E}_{3}=\mathrm{E}_{1} \times \frac{z^{2}}{n^{2}}, \quad \mathrm{E}_{3}=\mathrm{E}_{1} \times \frac{1^{2}}{3^{2}}, \mathrm{E}_{3}=\frac{1}{9} \times \mathrm{E}_{1}$
4. Option (1) is correct.

Here formation of alkene takes place through dehydration of alcohol in the presence of acidic medium
Step 1 : Protonation of alcohol

Step 2 : Removal of $\mathrm{H}_{2} \mathrm{O}$ takes place to form carbocation
carbocation

Step 3 : Deprotonation

Finally both rings will become six membered each.
5. Option (3) is correct.

A
a) Nylon-6
b) Vulcanized Rubber
c) cis-1,4-polyisoprene
d) Poly chloroprene

A-III, B-II, C-I, D-IV
6. Option (4) is correct.

Lyophilic sol are more stable than lyophobic sols. This is due to the fact that lyophilic sol are extensively solvated $\therefore$ it lyophilic particles form a later around lyophobic particles \& thus protect the letter from electrolytes. Lyophilic sol are called protective colloid.
7. Option (3) is correct.

Here protonation of alcohol leads to the formation of alkene.
8. Option (4) is correct.

When n -alkene heated in the presence of anhy. $\mathrm{AlCl}_{3}$ and HCl gas, formation of isomeric alkane takes place here due to 1,2-methyl shift formation of iso hexane takes place from $n$-hexane.

9. Option (3) is correct.

In $\mathrm{SN}^{2}$ mechanism both substrate and nucleophile molecule required for the reaction, here strong nucleophile is required to participate in the reaction to form the nucleophillic substituted product.

Iso butylethyl ether
In $\mathrm{SN}^{1}$ mechanism, the reaction depends upon the concentration of substrate molecule. It is independent of concentration of nucleophile.

In $\mathrm{SN}^{1}-\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}$ act as a weak nucleophile while in $\mathrm{SN}^{2} \mathrm{C}_{2} \mathrm{H}_{5} \mathrm{O}^{-}$is a strong nucleophile.
10. Option (2) is correct.

Here the ring opening of cyclic amide takes place in the presence of base to obtain N -alkyl amino acid.

11. Option (3) is correct.

D-(+)-glyceraldehyde

Both are optically active

optically inactive
(It contain plane of symmetry) plane of symmetry)
12. Option (1) is correct.
$\mathrm{ClF}_{5}$ is an interhalogen compound, in which central atom chlorine is $\mathrm{sp}^{3} \mathrm{~d}^{2}$ hybridised and form a square pyramidal structure.

$s p^{3} d^{2}$ square pyramidal

It is also a colourless liquid.
13. Option (4) is correct.
$\mathrm{Eu} \quad: \quad 4 f^{7} 6 \mathrm{~s}^{2}$
$(z=63)$
$\mathrm{Eu}^{2+} \quad: \quad 4 \mathrm{f}^{7}$ (half filled configuration)
$\mathrm{Yb} \quad: \quad 4 \mathrm{f}^{14} 6 \mathrm{~s}^{2}$
( $\mathrm{z}=70$ )
$\mathrm{Yb}^{2+} \quad: \quad 4 \mathrm{f}^{14}$ (full filled configuration)
The pair of lanthanide in which both elements have high $3^{\text {rd }}$ ionization energy is $\mathrm{Yb}^{2+} \& \mathrm{Eu}^{2+}$ and the reasons of high ionization is half filled and full filled configuration of the ions.
14. Option (1) is correct.

A is incorrect: In chlorophyll Mg -atom is present not cobalt.
C is incorrect: In photography, the developed film is fixed by washing with hypo solution which get dissolved in un decomposed AgBr to form a complex a complex of $\left[\mathrm{Ag}\left(\mathrm{S}_{2} \mathrm{O}_{3}\right)_{2}\right]^{3-} \operatorname{not}\left[\mathrm{Ag}(\mathrm{CN})_{2}\right]^{-}$
So A and C is incorrect i.e., Option (1)
15. Option (1) is correct.
$A$ is incorrect: The electron gain enthalpy of $F$ is less negative than that of Cl due to high electronelectron repulsion in F compared to Cl atom.
$C$ is incorrect: The electronegativity of an atom is the tendency of an atom to get attached itself with the other atom via single covalent bond.
D is incorrect: $\mathrm{Al}_{2} \mathrm{O}_{3}$ is an amphoteric oxide while NO is a neutral oxide
Statement A,C and D is incorrect i.e., Option (1) only.
16. Option (4) is correct.

The ozone depletion in the presence of UV radiation is mainly due to Cl radiacal.
$\mathrm{O}_{2}(\mathrm{~g}) \xrightarrow{\mathrm{uv}} \mathrm{O}(\mathrm{g})+\mathrm{O}(\mathrm{g})$
$\mathrm{O}_{2}(\mathrm{~g})+\mathrm{O}(\mathrm{g}) \rightarrow \mathrm{O}_{3}(\mathrm{~g})$
$\mathrm{CF}_{2} \mathrm{Cl}_{2}(\mathrm{~g}) \rightarrow \dot{\mathrm{C}}(\mathrm{g})+\dot{\mathrm{C}} \mathrm{F}_{2} \mathrm{Cl}(\mathrm{g})$
$\dot{\mathrm{C}}(\mathrm{g})+\mathrm{O}_{3}(\mathrm{~g}) \rightarrow \mathrm{Cl} \dot{\mathrm{O}}(\mathrm{g})+\mathrm{O}_{2}(\mathrm{~g})$
$\mathrm{Cl} \dot{\mathrm{O}}(\mathrm{g})+\mathrm{O}(\mathrm{g}) \rightarrow \dot{\mathrm{C}}(\mathrm{g})+\mathrm{O}_{2}(\mathrm{~g})$
The main source of $\dot{\mathrm{C}} 1$ radical in the atmosphere is $\mathrm{CF}_{2} \mathrm{Cl}_{2}$ (Chlorofluorocarbon) which gets banned in the world.
17. Option (3) is correct.

The number of $\mathrm{e}^{-}$in $\mathrm{NO}=15$
The electronic configuration of $\mathrm{NO}=$
$\sigma 1 s^{2}, \sigma^{*} 1 s^{2}, \sigma 2 s^{2}, \sigma^{*} 2 s^{2}, \sigma 2 \mathrm{P}_{\mathrm{z}}^{2}, \pi 2 \mathrm{P}_{\mathrm{x}}^{2}=\pi 2 \mathrm{p}^{2} \mathrm{y}, \pi 2 \mathrm{p}^{1} \mathrm{x}$, $=\pi 2 \mathrm{p}^{0} \mathrm{y}$
Here bond order $=\frac{\mathrm{N}_{\mathrm{b}}-\mathrm{N}_{\mathrm{a}}}{2}=\frac{10-5}{2}=2.5$
Nature is paramagnetic, due to the presence of one unpaired electron.
On the removal of one $\mathrm{e}^{-}$from $\pi 2 \mathrm{Px}^{1}=\pi 2 \mathrm{Py}^{0}$ the bond order get changed from 2.5 to 3.0 i.e., bond order increases.
Similarly the paramagnetic nature of the substance also gets changed to diamagnetic

|  | $\mathrm{NO} \longrightarrow$ | $\mathrm{NO}^{\oplus}$ |
| :--- | :--- | :--- | :--- |
| Bond order | 2.5 | 3.0 |
| Magnetic nature |  |  | paramagnetic | diamagnetic |
| :--- | :--- |

18. Option (4) is correct

The structure of benzene is -

- Cyclic compound
- It contain conjugated system in which delocalization of $\mathrm{e}^{-}$takes place.
- It can react with water to produce $\mathrm{H}_{3} \mathrm{BO}_{3}$ and releases $\mathrm{NH}_{3}$ gas.
$\mathrm{B}_{3} \mathrm{~N}_{3} \mathrm{H}_{6}+9 \mathrm{H}_{2} \mathrm{O} \rightarrow 3 \mathrm{NH}_{3}+3 \mathrm{H}_{3} \mathrm{BO}_{3}+3 \mathrm{H}_{2}$

19. Option (2) is correct.

Among the given compounds

Contains highest dipole moment because both the + ve and -ve ends of the above complex acquire aromatic nature.

Both follow $(4 n+2) \pi \mathrm{e}^{-}$
$\therefore$ They are aromatic in nature.
20. Option (3) is correct.
$\mathrm{Be}(\mathrm{OH})_{2}$ is amphoteric in nature which can react with both acidic as well as basic substance.

$$
\begin{gathered}
\mathrm{Be}(\mathrm{OH})_{2} \\
\text { acid }
\end{gathered} \underset{\text { base }}{\mathrm{Sr}(\mathrm{OH})_{2}} \rightarrow \underset{\mathrm{Sr}\left[\mathrm{Br}(\mathrm{OH})_{4}\right]}{\text { salt }}
$$

Be contains vacant orbital in $\mathrm{Be}(\mathrm{OH})_{2}$ and act as an $\mathrm{e}^{-}$deficient compound as well as lewis acid 08 it accepts e- pair in the form of $\mathrm{OH}^{-}$from $\mathrm{Sr}(\mathrm{OH})_{2}$ to form salt.
Here in the $\mathrm{Sr}\left[\mathrm{Be}(\mathrm{OH})_{4}\right]$ salt, element Be is present in the anionic part of the salt not in the cationic part.
$\mathrm{Sr}\left[\mathrm{Be}(\mathrm{OH})_{4}\right] \rightarrow \mathrm{Sr}^{2+}+\left[\mathrm{Be}(\mathrm{OH})_{4}\right]^{2-}$
So statement (3) is incorrect.

## Section B

21. Correct answer is [240].

Given $\mathrm{W}_{\mathrm{A}}=12 \mathrm{gm} \mathrm{V}=1000 \mathrm{~mL}$
$C_{\text {glucose }}=0.05 \mathrm{M}$
As osmotic pressure of both is same
$\pi_{\mathrm{A}}=\pi_{\text {glucose }}$
$\mathrm{C}_{\mathrm{A}} \mathrm{RT}=\mathrm{C}_{\text {glucose }} \mathrm{RT}$
$\frac{12}{\mathrm{M}_{\mathrm{A}}} \times \frac{1}{1 \mathrm{~L}} \times \mathrm{RT}=0.05 \mathrm{RT}$
$M_{A}=\frac{12}{0.05}=\frac{1200}{5}=240 \mathrm{gm}$
22. Correct answer is [68].

The balanced chemical reaction of $\mathrm{KMnO}_{4}$ with mohr salt is as follows-

$$
\begin{array}{r}
2 \mathrm{KMNnO}_{4}+8 \mathrm{H}_{2} \mathrm{SO}_{4}+10 \mathrm{FeSO}_{4} \cdot\left(\mathrm{NH}_{4}\right)_{2} \mathrm{SO}_{4} \cdot 6 \mathrm{H}_{2} \mathrm{O} \\
\rightarrow 10\left(\mathrm{NH}_{4}\right)_{2} \mathrm{SO}_{4}+\mathrm{K}_{2} \mathrm{SO}_{4}+2 \mathrm{MnSO}_{4} \\
+5 \mathrm{Fe}_{2}\left(\mathrm{SO}_{4}\right)_{3}+68 \mathrm{H}_{2} \mathrm{O}
\end{array}
$$

From the given balanced chemical reaction 68 molecules of $\mathrm{H}_{2} \mathrm{O}$ will be produced from 2 molecules of $\mathrm{KMnO}_{4}$
23. Correct answer is [1].

Initially $\mathrm{Ca}(\mathrm{OH})_{2}$ reacts with unknown $\mathrm{H}_{2} \mathrm{SO}_{4}$ solution.
$\mathrm{Ca}(\mathrm{OH})_{2}+\mathrm{H}_{2} \mathrm{SO}_{4} \rightarrow \mathrm{CaSO}_{4}+2 \mathrm{H}_{2} \mathrm{O}$
m.eq of $\mathrm{Ca}(\mathrm{OH})_{2}=$ m.eq of $\mathrm{H}_{2} \mathrm{SO}_{4}$
$\mathrm{M}_{1} \times 2 \times 20=\mathrm{M}_{2} \times 2 \times 10$
$2 \mathrm{M}_{1}=\mathrm{M}_{2}$
The remaining $\mathrm{Ca}(\mathrm{OH})_{2}$ reacts with HCl to form salt and water
$\mathrm{Ca}(\mathrm{OH})_{2}+2 \mathrm{HCl} \rightarrow \mathrm{CaCl}_{2}+2 \mathrm{H}_{2} \mathrm{O}$
m.eq of $\mathrm{HCl}=$ m.eq of $\mathrm{Ca}(\mathrm{OH})_{2}$
$20 \times 0.5=10 \times \mathrm{M}_{1} \times 2$
$\mathrm{M}_{1}=0.5 \mathrm{M}$
From (1) and (2)
$\mathrm{M}_{2}=2 \mathrm{M}_{1}=2 \times 0.5 \mathrm{M}=1 \mathrm{M}$
24. Correct answer is [3].

For $87.5 \%$ completion
$\mathrm{K}=\frac{2.303}{t_{87.5}} \times \log \frac{100}{100-87.5}$
$K=\frac{2.303}{t_{87.5}} \times \log \frac{100}{12.5}$
For 50\% completion
$K=\frac{2.303}{t_{50}} \times \log \frac{100}{100-50}$
$K=\frac{2.303}{t_{50}} \times \log \frac{100}{50}$
Form (1) and (2)
$\frac{2.303}{t_{50}} \times \log 2=\frac{2.303}{t_{87.5}} \times \log 8$
$\log \left(\frac{8}{2}\right)=\frac{t_{50}}{t_{87.5}}$
$\mathrm{T}_{87.5}=3 \times t_{50}$
25. Correct answer is [392].

From $Z=\frac{P V}{n R T}$
$\frac{\mathrm{Z}_{1}}{\mathrm{Z}_{2}}=\frac{\mathrm{P}_{1} \mathrm{~V}_{1}}{\mathrm{nRT}_{1}} \times \frac{\mathrm{nRT}_{2}}{\mathrm{P}_{2} \mathrm{~V}_{2}}$
Given $\mathrm{Z}_{1}=1.07 \mathrm{Z}_{2}=1.4$
$P_{1}=100 \mathrm{~atm} \mathrm{~V}_{1}=0.15 \mathrm{dm}^{3} \mathrm{~T}_{1}=500 \mathrm{~K}$
$P_{2}=3000 \mathrm{~atm} \mathrm{~V}_{2}=? \mathrm{~T}_{2}=300 \mathrm{~K}$
$\frac{1.07}{1.4}=\left(\frac{1000 \mathrm{~atm} \times 0.15 \mathrm{dm}^{3}}{500 \mathrm{k}}\right) \times\left(\frac{300 \mathrm{k}}{300 \mathrm{~atm} \times \mathrm{V}_{2}}\right)$
$\mathrm{V}_{2}=\frac{0.03 \times 1.4}{1.07}=0.03925 \mathrm{dm}^{3}$
$\mathrm{V}_{2}=392 \times 10^{-4} \mathrm{dm}^{3}$
26. Correct answer is [161].

Vol of nickel required $=(100 \mathrm{~cm})^{2} \times 0.001 \times 10^{-3} \mathrm{~cm}$ $=0.01 \mathrm{~cm}^{3}=0.01 \mathrm{~mL}$
Mass of nickel required $=d \times \mathrm{V}$
$=10 \mathrm{gm} / \mathrm{mL} \times 0.01 \mathrm{~mL}$
$=0.1 \mathrm{gm}$
Moles of $\mathrm{Ni}=\frac{0.1 \mathrm{gm}}{60 \mathrm{gm} / \mathrm{mol}}=\frac{1}{600} \mathrm{~mol}$
$\mathrm{Ni}^{2+}(\mathrm{aq})+2 \mathrm{e}^{-} \rightarrow \mathrm{Ni}(\mathrm{s})$
For coating of 1 mol Ni
charges required $=2 \times 96500 \mathrm{C}$
So for coating of $\frac{1}{600} \mathrm{~mol} \mathrm{NI}$
charges required $=2 \times 96500 \mathrm{c} \times \frac{1}{600}=\frac{965}{3}$
As $\mathrm{Q}=\mathrm{It}$
So $t=\frac{\mathrm{q}}{\mathrm{I}}=\frac{965 / 3 \mathrm{C}}{2 \mathrm{~A}}$
$\approx 161 \mathrm{sec}$
27. Correct answer is [5].

Mmol of $\mathrm{Ba}\left(\mathrm{NO}_{3}\right)_{2}=\mathrm{mmol}$ of $\mathrm{Ba}^{2+}$
$=25 \mathrm{ml} \times 0.05 \mathrm{M}=1.25 \mathrm{mmol}$
Mmol of $\mathrm{NaF}=\mathrm{mmol}$ of $\mathrm{F}^{-}$
$=25 \mathrm{ml} \times 0.02 \mathrm{M}=0.5 \mathrm{mmol}$
After mixing volume gets double new conc ${ }^{\mathrm{n}}$ of $\mathrm{Ba}^{2+}$ and $\mathrm{F}^{-}$is-
$\left[\mathrm{Ba}^{2+}\right]=\frac{1.25 \mathrm{mmol}}{50 \mathrm{~mL}}=0.025 \mathrm{M}$
$\left[\mathrm{F}^{-}\right]=\frac{0.5 \mathrm{mmol}}{50 \mathrm{~mL}}=0.01 \mathrm{M}$
Ksp $=\left[\mathrm{Ba}^{2+}\right]\left[\mathrm{F}^{-}\right]^{2}$
Given ksp $=5 \times 10^{-7}$
Ratio of $\frac{\left[\mathrm{Ba}^{2+}\right]\left[\mathrm{F}^{-}\right]}{\mathrm{Ksp}}=\frac{(0.025)(0.01)^{2}}{5 \times 10^{-7}}$

$$
=\frac{2.5 \times 10^{-7}}{5 \times 10^{-7}}=5
$$

Ratio of $\frac{\left[\mathrm{Ba}^{2+}\right]\left[\mathrm{F}^{-}\right]}{\mathrm{Ksp}}=5$
28. Correct answer is [400].

The balanced chemical reaction is

$$
\mathrm{A}_{2}+\mathrm{B}_{2} \rightarrow 2 \mathrm{AB} \quad \Delta \mathrm{H}_{f}=-200 \mathrm{~kJ} / \mathrm{mol}
$$

Given bond enthalpy of $\mathrm{A}_{2}=x$
Given bond enthalpy of $\mathrm{B}_{2}=0.5 x$
Given bond enthalpy of $\mathrm{AB}=x$
$\Delta \mathrm{H}_{f}=(\mathrm{B} . \mathrm{E})_{\mathrm{R}}-(\mathrm{B} . \mathrm{E})_{\mathrm{p}}=-200$
$=\left(\mathrm{A}_{2}\right)+\left(\mathrm{B}_{2}\right)-2(\mathrm{AB})=-200$
$=x+0.5 x-2 x=-200$
$=x=\frac{200}{0.5}=400 \mathrm{KJ} / \mathrm{mol}$
29. Correct answer is [56].

$$
\% \text { of carbon }=\frac{\text { mass of } \mathrm{CO}_{2}}{\frac{\text { molar mass }}{x} \times 100} \times 12
$$

Where $x=$ mass of organic compound

$$
\begin{aligned}
\% \text { of carbon } & =\frac{0.220}{\frac{44}{x} \times 100} \times 12 \\
24 & =\frac{6}{x} \\
x & =0.25
\end{aligned}
$$

For H -atom
$\%$ of H -atom $=\frac{\text { mass of } \mathrm{H}}{\frac{\text { molar mass }}{x} \times 100} \times 2$

$$
=\frac{\frac{0.126}{\frac{18}{0.25}}}{x} \times 2 \times 100
$$

$$
\begin{aligned}
\% \text { of } \mathrm{H} & =5.6 \\
& =56 \times 10^{-1}
\end{aligned}
$$

30. Correct answer is [5].

(B)

(A)

A gives two product while B gives 3 product

Total five products are formed.
