## JEE (Main) CHEMISTRY SOLVED PAPER

## Section A

Q.1. The $\mathrm{Cl}-\mathrm{Co}-\mathrm{Cl}$ bond angle values in a fac $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{3} \mathrm{Cl}_{3}\right]$ complex is/are:
(1) $90^{\circ}$
(2) $90^{\circ} \& 120^{\circ}$
(3) $180^{\circ}$
(4) $90^{\circ} \& 180^{\circ}$
Q. 2. The correct order of $\mathrm{pK}_{\mathrm{a}}$ values for the following compounds is:
(a)

(b)
(c)
(d)
(1) $c>a>d>b$
(2) b $>$ a $>$ d $>$ c
(3) b $>$ d $>$ a $>$ c
(4) a $>$ b $>$ c $>$ d
Q.3. Given below are two statements:

Statement I : During Electrolytic refining, the pure metal is made to act as anode and its impure metallic form is used as cathode.
Statement II: During the Hall-Heroult electrolysis process, purified $\mathrm{Al}_{2} \mathrm{O}_{3}$ is mixed with $\mathrm{Na}_{3} \mathrm{AlF}_{6}$ to lower the melting point of the mixture.
In the light of the above statements, choose the most appropriate answer from the options given below:
(1) Statement I is correct but Statement II is incorrect
(2) Both Statement I and Statement II are incorrect
(3) Both Statement I and Statement II are correct
(4) Statement I is incorrect but Statement II is correct
Q. 4. Match List I with List II:

| List I <br> (Mixture) | List II <br> (Separation Technique) |
| :--- | :--- |
| A. $\mathrm{CHCl}_{3}+\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{NH}_{2}$ | I. Steam distillation |
| B. $\mathrm{C}_{6} \mathrm{H}_{14}+\mathrm{C}_{6} \mathrm{H}_{12}$ | II. Differential extractiom |
| C. $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{NH}_{2}+\mathrm{H}_{2} \mathrm{O}$ | III. Distillation |
| D. Organic compound in <br> $\mathrm{H}_{2} \mathrm{O}$ | IV. Fraction distillation |

(1) A-IV, B-I, C-III, D-II
(2) A-III, B-IV, C-I, D-II
(3) A-III, B-I, C-IV, D-II
(4) A-II, B-I, C-III, D-IV
Q. 5. $\quad 1 \mathrm{~L}, 0.02 \mathrm{M}$ solution of $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5} \mathrm{SO}_{4}\right] \mathrm{Br}$ is mixed with $1 \mathrm{~L}, 0.02 \mathrm{M}$ solution of $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5} \mathrm{Br}^{2}\right] \mathrm{SO}_{4}$. The resulting solution is divided into two equal parts $(\mathrm{X})$ and treated with excess of $\mathrm{AgNO}_{3}$ solution
and $\mathrm{BaCl}_{2}$ solution respectively as shown below:
1 L solution $(\mathrm{X})+\mathrm{AgNO}_{3}$ solution (excess) $\rightarrow \mathrm{Y}$
1 L Solution (X) $+\mathrm{BaCl}_{2}$ solution (excess) $\rightarrow \mathrm{Z}$
The number of moles of $Y$ and $Z$ respectively are
(1) $0.02,0.01$
(2) $0.01,0.01$
(3) $0.01,0.02$
(4) $0.02,0.02$
Q.6. Decreasing order towards SN 1 reaction for the following compounds is:

(a)

(b)

(c)
(d)
(1) a $>$ c $>$ d $>$ b
(2) b $>$ d $>$ c $>$ a
(3) a $>$ b $>$ c $>$ d
(4) $d>b>c>a$
Q. 7. Which of the following reaction is correct?
(1) $4 \mathrm{LiNO}_{3} \xrightarrow{\Delta} 2 \mathrm{Li}_{2} \mathrm{O}+2 \mathrm{~N}_{2} \mathrm{O}_{4}+\mathrm{O}_{2}$
(2) $2 \mathrm{LiNO}_{3} \xrightarrow{\Delta} 2 \mathrm{NaNO}_{2}+\mathrm{O}_{2}$
(3) $2 \mathrm{LiNO}_{3} \rightarrow 2 \mathrm{Li}+2 \mathrm{NO}_{2}+\mathrm{O}_{2}$
(4) $4 \mathrm{LiNO}_{3} \xrightarrow{\Delta} 2 \mathrm{Li}_{2} \mathrm{O}+4 \mathrm{NO}_{2}+\mathrm{O}_{2}$
Q.8. Boric acid is solid, whereas $\mathrm{BF}_{3}$ is gas at room temperature because of
(1) Strong van der Waal's interaction in Boric acid
(2) Strong covalent bond in $\mathrm{BF}_{3}$
(3) Strong ionic bond in Boric acid
(4) Strong hydrogen bond in Boric acid
Q. 9. Given below are two statements: One is labelled as Assertion A and the other is labelled as Reason R.

Assertion A: Antihistamines do not affect the secretion of acid in stomach.
Reason : Antiallergic and antacid drugs work on different receptors.
In the light of the above statements, choose the correct answer from the options given below:
(1) $A$ is false but $R$ is true
(2) Both $A$ and $R$ are true but $R$ is not the correct explanation of A
(3) Both $A$ and $R$ are true and $R$ is the correct explanation of A
(4) $A$ is true but $R$ is false
Q. 10. Formulae for Nessler's reagent is:
(1) $\mathrm{HgI}_{2}$
(2) $\mathrm{K}_{2} \mathrm{HgI}_{4}$
(3) $\mathrm{KHgI}_{3}$
(4) $\mathrm{KHg}_{2} \mathrm{I}_{2}$
Q. 11. Given below are two statements: One is labelled as Assertion A and the other is labelled as Reason R.

Assertion A:
 can be easily reduced using $\mathrm{Zn}-\mathrm{Hg} / \mathrm{HCl}$ to

Reason R: $\mathrm{Zn}-\mathrm{Hg} / \mathrm{HCl}$ is used to reduce carbonyl group to $-\mathrm{CH}_{2}-$ group.
In the light of the above statements, choose the correct answer from the options given below:
(1) A is true but $R$ is false
(2) Both $A$ and $R$ are true and $R$ is the correct explanation of A
(3) A is false but R is true
(4) Both $A$ and $R$ are true but $R$ is not the correct explanation of A
Q.12. Maximum number of electrons that can be accommodated in shell with $n=4$
(1) 16
(2) 32
(C) 72
(D) 50
Q. 13. The wave function $(\Psi)$ of 2 s is given by

$$
\Psi_{2} \mathrm{~s}=\frac{1}{2 \sqrt{2 \pi}}\left(\frac{1}{a_{0}}\right)^{1 / 2}\left(2-\frac{r}{a_{0}}\right) e^{-r / 2 a_{0}}
$$

At $r=r_{0}$, radial node is formed. Thus, $r_{0}$ in terms of $a_{0}$
(1) $r_{0}=4 a_{0}$
(2) $r_{0}=\frac{a_{0}}{2}$
(3) $r_{0}=a_{0}$
(4) $r_{0}=2 a_{0}$
Q. 14.

In the above conversion of compound $(X)$ to product $(\mathrm{Y})$, the sequence of reagents to be used will be:
(1) (i) $\mathrm{Br}_{2}$ (aq) (ii) $\mathrm{LiAIH}_{4}$ (iii) $\mathrm{H}_{3} \mathrm{O}_{+}$
(2) (i) $\mathrm{Br}_{2}, \mathrm{Fe}$ (ii) $\mathrm{Fe}, \mathrm{H}^{+}$(iii) $\mathrm{LiAIH}_{4}$
(3) (i) $\mathrm{Fe}, \mathrm{H}^{+}$(ii) $\mathrm{Br}_{2}$ (aq) (iii) $\mathrm{HNO}_{2}$ (iv) $\mathrm{H}_{3} \mathrm{PO}_{2}$
(4) (i) $\mathrm{Fe}, \mathrm{H}^{+}$(ii) $\mathrm{Br}_{2}$ (aq) (iii) $\mathrm{HNO}_{2}$ (iv) CuBr
Q. 15. Match List I with List II:

| List I (Complexes) | List II (Hybridisation) |
| :--- | :--- |
| A. $\left[\mathrm{Ni}(\mathrm{CO})_{4}\right]$ | I. $\mathrm{sp}^{3}$ |
| B. $\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{4}\right]^{2+}$ | II. dsp ${ }^{2}$ |
| C. $\left[\mathrm{Fe}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}$ | III. $\mathrm{sp}^{3} \mathrm{~d}^{2}$ |
| D. $\left[\mathrm{Fe}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{2+}$ | IV. $\mathrm{d}^{2} \mathrm{sp}^{3}$ |

(1) A-I, B-II, C-IV, D-III
(2) A-II, B-I, C-III, D-IV
(3) A-II, B-I, C-IV, D-III
(4) A-I, B-II, C-III, D-IV
Q.16. The most stable carbocation for the following is:

(b)

(c)
(d)
Q. 17. Chlorides of which metal are soluble in organic solvents:
(1) K
(2) Be
(3) Mg
(4) Ca
Q. 18. $\mathrm{KMnO}_{4}$ oxidises $\mathrm{I}^{-}$in acidic and neutral/faintly alkaline solution, respectively, to
(1) $\mathrm{IO}_{3}^{-} \& \mathrm{IO}_{3}^{-}$
(2) $\mathrm{I}_{2} \& \mathrm{IO}_{3}^{-}$
(3) $\mathrm{I}_{2} \& \mathrm{I}_{2}$
(4) $\mathrm{IO}_{3}^{-} \& \mathrm{I}_{2}$
Q.19. Bond dissociation energy of " $\mathrm{E}-\mathrm{H}$ " bond of the " $\mathrm{H}_{2} \mathrm{E}$ " hydrides of group 16 elements (given below), follows order.
A. O
B. S
C. Se
D. Te

Choose the correct from the options given below:
(1) B $>$ A $>$ C $>$ D
(2) A $>$ B $>$ D $>$ C
(3) A $>$ B $>$ C $>$ D
(4) D $>$ C $>$ B $>$ A
Q. 20. The water quality of a pond was analysed and its BOD was found to be 4 . The pond has
(1) Highly polluted water
(2) Slightly polluted water
(3) Water has high amount of fluoride compounds
(4) Very clean water

## Section B

Q. 21. Number of compounds from the following which will not dissolve in cold $\mathrm{NaHCO}_{3}$ and NaOH solutions but will dissolve in hot NaOH solution is

Q. 22. 1 mole of ideal gas is allowed to expand reversibly and adiabatically from a temperature of $27^{\circ} \mathrm{C}$. The work done is $3 \mathrm{~kJ} \mathrm{~mol}^{-1}$. The final temperature of the gas is $\qquad$ $K$ (Nearest integer). Given $C_{V}$ $=20 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}$ A short peptide on complete hydrolysis produces
3 moles of glycine (G), two moles of leucine (L) and two moles of valine (V) per mole of peptide. The number of peptide linkages in it are
Q. 24. Lead storage battery contains $38 \%$ by weight solution of $\mathrm{H}_{2} \mathrm{SO}_{4}$. The van't Hoff factor is 2.67 at this concentration. The temperature in Kelvin at which the solution in the battery will freeze is (Nearest integer). Given $K_{f}=1.8 \mathrm{~K} \mathrm{~kg} \mathrm{~mol}^{-1}$
Q. 25. The strength of 50 volume solution of hydrogen peroxide is $\qquad$ $g /$ L (Nearest integer).
Given: Molar mass of $\mathrm{H}_{2} \mathrm{O}_{2}$ is $34 \mathrm{~g} \mathrm{~mol}^{-1}$
Molar volume of gas at STP $=22.7 \mathrm{~L}$.
Q. 26. The electrode potential of the following half cell at 298 K
$\mathrm{X}\left|\mathrm{X}^{2+}(0.001 \mathrm{M}) \| \mathrm{Y}^{2+}(0.01 \mathrm{M})\right| \mathrm{Y}$ is $\qquad$ $\times 10^{-2} \mathrm{~V}$ (Nearest integer).

Given: $\mathrm{E}_{\mathrm{X}^{2+} \mid \mathrm{X}}^{0}=-2.36 \mathrm{~V}, \mathrm{E}_{\mathrm{Y}^{+2} \mid \mathrm{Y}}^{0}$
$\mathrm{E}^{0} \mathrm{Y}^{2+1 \mathrm{Y}}=+0.36 \mathrm{~V}, \frac{2.303 R T}{\mathrm{~F}}=0.06 \mathrm{~V}$
Q.27. An organic compound undergoes first order decomposition. If the time taken for the $60 \%$ decomposition is 540 s , then the time required for $90 \%$ decomposition will be is $\qquad$ s. (Nearest integer).
Given: $\ln 10=2.3 ; \log 2=0.3$
Q.28. Consider the following equation:

$$
2 \mathrm{SO}_{2}(g)+\mathrm{O}_{2}(g) \rightleftharpoons 2 \mathrm{SO}_{3}(g), \Delta H=-190 \mathrm{~kJ}
$$

The number of factors which will increase the yield of $\mathrm{SO}_{3}$ at equilibrium from the following is
A. Increasing temperature
B. Increasing pressure
C. Adding more $\mathrm{SO}_{2}$
D. Adding more $\mathrm{O}_{2}$
E. Addition of catalyst
Q. 29. Iron oxide FeO , crystallises in a cubic lattice with a unit cell edge length of $5.0 \AA$. If density of the FeO in the crystal is $4.0 \mathrm{~g} \mathrm{~cm}^{-3}$, then the number of FeO units present per unit cell is $\qquad$ (Nearest integer)
Given: Molar mass of Fe and O is 56 and 16 g $\mathrm{mol}^{-1}$ respectively. $\mathrm{N}_{\mathrm{A}}=6.0 \times 10^{23} \mathrm{~mol}^{-1}$
Q.30. The graph of $\log \frac{x}{m}$ vs $\log \mathrm{p}$ for an adsorption process is a straight line inclined at an angle of
$45^{\circ}$ with intercept equal to 0.6020 . The mass of gas adsorbed per unit mass of adsorbent at the pressure of 0.4 atm is $\qquad$ $\times 10^{-1}$ (Nearest integer) Given: $\log 2=0.3010$

## Answer Key

| Q. No. | Answer | Topic Name | Chapter Name |
| :---: | :---: | :---: | :---: |
| 1 | (1) | Calculation of bond angle | Coordination chemistry |
| 2 | (3) | Pka value | Alcohol phenol and ether |
| 3 | (4) | Electrolytic refining of metals | Metallurgy |
| 4 | (2) | Separation technique | General organic chemistry |
| 5 | (2) | Werner coordination theory | Coordination chemistry |
| 6 | (2) | Nucleophilic substitution reaction | Halo alkane and Halo arenes |
| 7 | (4) | Heating effects | s block |
| 8 | (4) | Types of forces | States of matter |
| 9 | (3) | Classification of drugs | Chemistry in everyday life |
| 10 | (2) | Formula of a compounds | Amines |
| 11 | (4) | Clemmensen reduction | Aldehyde and ketones |
| 12 | (2) | Number of electron in a shell | Structure of atom |
| 13 | (4) | Identification of radial node | Structure of atom |
| 14 | (3) | Chemical properties of nitrogen containing compounds | Amines |
| 15 | (1) | Hybridization in coordination compounds | Coordination chemistry |
| 16 | (2) | Stability of carbocation | General organic chemistry |
| 17 | (2) | Solubility of compounds | Qualitative analysis |
| 18 | (2) | Identification of radical in acidic and basic medium | Qualitative analysis |
| 19 | (3) | Bond dissociation energy | p block |
| 20 | (4) | BOD value | Environmental chemistry |
| 21 | [3] | Reaction of compounds with sodium bicarbonate | Carboxylic acid |
| 22 | [150] | Calculation of temperature in an adiabatic process | Thermodynamics |
| 23 | [6] | Number of peptides linkAge | Biomolecules |
| 24 | [243] | Depression in freezing point | Liquid solution |
| 25 | [150] | Volume strength of hydrogen peroxide | Hydrogen |
| 26 | [275] | Standard reduction potential | Electro chemistry |
| 27 | [1350] | First order reaction | Chemical kinetics |
| 28 | [3] | Le chateliers principle | Chemical equilibrium |
| 29 | [4] | Calculation of number of unit cell | Solid state |
| 30 | [16] | Frendluich adsorption isotherm | Surface chemistry |

## Solutions

## Section A

1. Option (1) is correct.

Fac- $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{3}\right]$ is an isomer where all $\mathrm{NH}_{3}$ groups and cl groups occupies adjacent positions

Fac-isomer
Mer-isomer
Bond angle $=90^{\circ}$ Bond angle $=90^{\circ}$ and $180^{\circ}$
2. Option (3) is correct.

Acidic strength is inversely proportional to pka.
Acidic strength depends upon the substituent attached on the phenol .EWG increases the acidic strength by stabilising the phenoxide ion whereas EDG decreases the acidic character by destabilising the phenoxide ion.

(c)

(d)

( +M )

(b)

A order of acidic strength: $c>a>d>b$ Order of $\mathrm{pK}_{\mathrm{a}}: c<a<d<b$

## 3. Option (4) is correct.

In Electrolytic refining, the pure metal is used as cathode and impure metal is used as anode. $\mathrm{Na}_{3}$ $\mathrm{AlF}_{6}$ and $\mathrm{CaF}_{2}$ is added during electrolysis of $\mathrm{Al}_{2} \mathrm{O}_{3}$ to lower the melting point and increase conductivity.
4. Option (2) is correct.

| List I <br> (Mixture) | List II <br> (Separation Technique) |
| :--- | :--- |
| $\mathrm{CHCl}_{3}+\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{NH}_{2}$ | Distillation |
| $\mathrm{C}_{6} \mathrm{H}_{14}+\mathrm{C}_{5} \mathrm{H}_{12}$ | Fractional Distillation |
| $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{NH}_{2}+\mathrm{H}_{2} \mathrm{O}$ | Steam distillation |
| Organic compound <br> in $\mathrm{H}_{2} \mathrm{O}$ | Differential extraction |

5. Option (2) is correct.

Mixture $X$ contains 0.02 moles of $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5} \mathrm{Br}^{2} \mathrm{SO}_{4}\right.$ and 0.02 moles of $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5} \mathrm{Br}\right] \mathrm{SO}_{4}$ was prepared in two litres of solution. So, the concentration of $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5} \mathrm{SO}_{4}\right] \mathrm{Br}$ and $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5} \mathrm{Br}\right] \mathrm{SO}_{4}$ in solution are 0.01 mol L and 0.01 mol L respectively. During the reaction with $\mathrm{AgNO}_{3}$ (excess), AgBr is precipitated as follows:

Hence, number of moles of $\mathrm{Y}=0.01$
On addition of excess $\mathrm{BaCl}_{2}, \mathrm{SO}_{4}^{2-}$ ions of $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5}\right.$ $\mathrm{Br}] \mathrm{SO}_{4}$ is precipitated in form of Z .

$$
\left[\underset{0.01 \mathrm{~mol} / \mathrm{L}}{\left.\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5} \mathrm{SO}_{4}\right]}+\underset{\text { (excess) }}{\mathrm{BaCl}_{2}} \rightarrow \underset{\substack{\mathrm{Z} \\ \hline 0.01 \mathrm{~mol} / \mathrm{L}}}{\mathrm{BaSO}_{4}} \downarrow+\underset{\text { Soluble }}{\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5} \mathrm{Br}^{\mathrm{Br}} \mathrm{Cl}_{2}\right.} \underset{\mathrm{Z}}{ }\right.
$$

Hence, number of moles of $Z=0.01$
Thus, the number of moles of $Y$ and $Z$ are 0.01 and 0.01 respectively.
6. Option (2) is correct.

The reactivity order of the given aryl halides towards $\mathrm{S}_{\mathrm{N}} 1$ reaction will be decided by the stability of their corresponding carbocations.

(b)
(c)

(d)

The benzyl carbocation is stabilised by resonance. The presence of $-\mathrm{NH}_{2}$ group at the p -position promotes the resonance stabilisation due to +R effect. The -OMe group also promotes but to a lesser extent due to higher electronegativity of O -atom than N - atom. The $-\mathrm{NO}_{2}$ group opposes the resonance stabilisation due to its -R effect.
$\therefore$ The correct order is $c>b>d>a$.
7. Option (4) is correct.

Due to the small size of $\mathrm{Li}^{+}$, high polarising power and non availability of d orbitals. Lithinum nitrate when heated gives lithium oxide, $\mathrm{Li}_{2} \mathrm{O}$. This property of Li is in diagonal relationship with Mg .

$$
4 \mathrm{LiNO}_{3} \rightarrow 2 \mathrm{Li}_{2} \mathrm{O}+4 \mathrm{NO}_{2}+\mathrm{O}_{2}
$$

8. Option (4) is correct.

Boric acid has strong hydrogen bonding while $\mathrm{BF}_{3}$ does not. Therefore boric acid is solid.

## 9. Option (3) is correct.

Antihistamines are the class of drugs which inhibits the physiological effects of histamine, used especially in the treatment of allergies. They do not affect the secretion of acid in the stomach because they act on different receptors. The receptors present in the stomach do not interact with antihistamine.
10. Option (2) is correct.

Nessler's reagent is an aqueous solution of potassium iodide, mercuric chloride hydroxide (KOH). It's molecular formula is $\mathrm{K}_{2} \mathrm{HgI}_{4}$.
Nessler's reagent is used as confirmatory test for ammonium ion $\mathrm{NH}_{4}^{+}$.

Confirmatory test for ammonium ion: Take aqueous solution of salt in test tube and add Nessler's reagent mixture. Appearance of brown or yellow precipitate confirms the presence of $\mathrm{NH}_{4}^{+}$ion.

$$
2 \mathrm{~K}_{2} \mathrm{Hgl}_{4}+\mathrm{NH}_{4} \mathrm{Cl}+4 \mathrm{KOH} \rightarrow \underset{\text { brown ppt. }}{\mathrm{NH}_{2} \mathrm{HgOHgl}} \downarrow+7 \mathrm{KI}
$$

$$
+\mathrm{KCl}+3 \mathrm{H}_{2} \mathrm{O}
$$

11. Option (4) is correct.

The above conversion is correct and can be easily carried out by using $\mathrm{Zn}-\mathrm{Hg} / \mathrm{HCl}$. This reaction is known as clemmensen reduction where carbonyl group is reduced methylene group $\left(\mathrm{CH}_{2}\right)$ using $\mathrm{Zn}-\mathrm{Hg} / \mathrm{HCl}$
12. Option (2) is correct.

Maximum number of electrons that can be accommodated in shell $=2 n^{2}$
( $n=4$ )
$2(4)^{2}=32$

| $4 s$ | 2 |
| :--- | :--- |
| $4 p$ | 6 |
| 4 d | 10 |
| 4 f | 14 |
| (Total) | 32 |

13. Option (4) is correct.

$$
\Psi_{2 s}=\frac{1}{2 \sqrt{2 \pi}}\left(\frac{1}{a_{0}}\right)^{1 / 2}\left(2-\frac{r}{a_{0}}\right) e^{-r / 2 a_{0}}
$$

At node, any wave function becomes zero, because at node, probability of finding an electron is zero.
Thus, $\Psi(2 s)=0$, which gives

$$
\begin{aligned}
& \Rightarrow & \left(2-\frac{r}{a_{0}}\right) & =0 \\
& \Rightarrow & \frac{r}{a_{0}} & =2 \\
& \Rightarrow & r & =2 a_{0}
\end{aligned}
$$

As $r=r_{0}$ at node, so $r_{0}=2 a_{0}$
14. Option (3) is correct.

15. Option (1) is correct.
(A) $\left[\mathrm{Ni}(\mathrm{Co})_{4}\right]$

The oxidation state of Ni is 0 . The electronic configuration of Ni. is $3 d^{8} 4 s^{2}$. As Co is a Strong rigard it with pairup the electrons.
$\left[\mathrm{Ni}(\mathrm{CO})_{4}\right]$

(B) $\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{4}\right]^{2+}$

The oxidation state of as is +2 . The electronic configuration of $\mathrm{Cu}^{2+}$ is $3 d^{9}$.
In this case $\mathrm{Cu}^{2+}$

The electron in $3 d_{x^{2}-y}{ }^{2}$ orbital is promoted if $4 p$ orbital $\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{4}\right]$

$\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{4}\right]^{2+}$|  | $3 d$ |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  | $1 L$ | $1 L$ | $1 L$ |
|  |  |  |  |  |

(C) $\left[\mathrm{Fe}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}$

The oxidation state of Fe is $\mathrm{Fe}^{2+}$. The electronic configuration of $\mathrm{Fe}^{2+}$ is $3 \mathrm{~d}^{6}$ since $\mathrm{NH}_{3}$ is a strong ligand, it will pair up the electrons.
$\left[\mathrm{Fe}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}$

|  |
| :---: |
|  |
| $\left[\mathrm{Fe}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}$ |
|  |
|  |

(D) $\left[\mathrm{Fe}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{2+}$

The oxidation state of Fe is $2+$. since $\mathrm{H}_{2} \mathrm{O}$ is a weak ligand, it will not pair up the electrons. $\left[\mathrm{Fe}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{2+}$

$\therefore$ A--I, B-II, c-IV, D-III

| List (Complexes) | List II (Hybridisation) |
| :---: | :---: |
| $\left[\mathrm{Ni}(\mathrm{CO})_{4}\right]$ | $\mathrm{sp}^{3}$ |
| $\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{4}\right]^{2+}$ | $\mathrm{dsp}^{2}$ |
| $\left[\mathrm{Fe}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}$ | $\mathrm{d}^{2} \mathrm{sp}^{3}$ |
| $\left[\mathrm{Fe}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{2+}$ | $\mathrm{sp}^{3} \mathrm{~d}^{2}$ |

16. Option (2) is correct.

The mock stable carbocation from the given carbocations, will be one whose the lone pair of N stabilises the positive sharge of the carbocation.

(A)

(B)
(No further congation to stabilise the carbocation)

(C)

(D)

Thus carbocation (C) would be most stable.
17. Option (2) is correct.

Out of the given elements, the chlorides of K and Ca are largely ionic. So, they will be more soluble in water and less soluble in organic solvents. Due to smaller size, $\mathrm{Be}^{+2}$. will show more polarising power, hence, Be will have maximum covalent character \& most soluble in organic solvent.
18. Option (2) is correct.

In acidic medium
$2 \mathrm{MnO}_{4}^{-}+10 \mathrm{I}^{-}+16 \mathrm{H}^{-} \rightarrow 2 \mathrm{Mn}^{2+}+5 \mathrm{I}_{2}+8 \mathrm{H}_{2} \mathrm{O}$
In neutral/faintly alkaline solution
$2 \mathrm{MnO}_{4}^{-}+\mathrm{I}^{-}+\mathrm{H}_{2} \mathrm{O} \rightarrow 2 \mathrm{MnO}_{2}+2 \mathrm{OH}^{-}+\mathrm{IO}_{3}^{-}$
19. Option (3) is correct.

Bond dissociation energy of $\mathrm{E}-\mathrm{H}$ bond in hydrides of group 16 follows the order
$\mathrm{H}_{2} \mathrm{O}>\mathrm{H}_{2} \mathrm{~S}>\mathrm{H}_{2} \mathrm{Se}>\mathrm{H}_{2} \mathrm{Te}$
This is because as we go down the group the bond length increases.
20. Option (4) is correct.

BOD- Biochemical Oxygen Demand is the amount of dissolved oxygen in a water body, required by microorganisms for the aerobic breakdown of organic matter in the water. Higher the value of BOD more is the amount of organic matter available for aerobic bacteria. this corresponds to the greater degree of pollution. Clean water have BOD value less than 5 ppm while highly polluted water have BOD value of 17 ppm or more. Thus the pond has very clean water.

## Section B

21. The correct answer is [3].

The Given functional groups in these compounds are carboxylic acid asters, ethers and alcohols, Now we will check their solubilities;

Carboxylic acid Ester Etarer alcohols

| cold $\mathrm{NaHCO}_{3}$ | $\checkmark$ | $\mathbf{x}$ | $\mathbf{x}$ | $\checkmark$ |
| :--- | :--- | :--- | :--- | :--- |
| cold NaOH | $\checkmark$ | $\mathbf{x}$ | $\mathbf{x}$ | $\checkmark$ |
| hot NaOH | $\checkmark$ | $\checkmark$ | $\mathbf{x}$ | $\checkmark$ |

22. The correct answer is [150].

From first law of thermodynamics,

$$
\Delta \mathrm{U}=\mathrm{q}+\mathrm{W}
$$

As we know that, for adiabatic condition, $q=0$
$\therefore \quad \Delta \mathrm{U}=\mathrm{W}$
At constant volume,

$$
\begin{equation*}
\Delta \mathrm{U}=\mathrm{nC}_{\mathrm{v}} \Delta \mathrm{~T} \tag{2}
\end{equation*}
$$

From eq (1) \& (2), we have

$$
\mathrm{W}=\mathrm{nC}_{\mathrm{v}} \Delta \mathrm{~T}
$$

Given:

$$
\begin{aligned}
\mathrm{T}_{\mathrm{i}} & =27^{0} \mathrm{C}=(27+273) \mathrm{K}=300 \mathrm{~K} \\
\Delta \mathrm{~T} & =\mathrm{T}_{\mathrm{f}}-\mathrm{T}_{\mathrm{i}}=\left(\mathrm{T}_{\mathrm{f}}-300\right) \\
\mathrm{C}_{\mathrm{v}} & =20 \mathrm{~J} / \mathrm{K} / \mathrm{mol} \\
\mathrm{~W} & =-3 \mathrm{~kJ}=-3 \times 10^{3} \mathrm{~J}
\end{aligned}
$$

[ $\because$ Work done by the gas is negative as it is expanding.]
Substituting all these values in eq ${ }^{\mathrm{n}}(3)$, we have

$$
\begin{aligned}
-3000 & =1 \times 20 \times\left(\mathrm{T}_{\mathrm{f}}-300\right) \\
\Rightarrow \quad \mathrm{T}_{\mathrm{f}}-300 & =-150 \\
\Rightarrow \quad \mathrm{~T}_{\mathrm{f}} & =300-150=150 \mathrm{~K}
\end{aligned}
$$

Hence the final temperature is 150 K .
23. The correct answer is [6].

Number of peptide linkage $=($ amino acid -1$)$

$$
=7-1=6
$$

24. The correct answer is [243].

Given, $\mathrm{W}_{\mathrm{H}_{2} \mathrm{SO}_{4}}=38 \mathrm{~g} ; \mathrm{W}_{\mathrm{H}_{2} \mathrm{O}}=62 \mathrm{~g}$

$$
\Delta \mathrm{T}_{f}^{4}=i . k f . \mathrm{m}
$$

$$
\mathrm{m}=\frac{38}{98} \times \frac{1000}{62}
$$

$$
\begin{aligned}
\Delta \mathrm{T}_{f} & =2.67 \times 1.8 \times \frac{38}{98} \times \frac{1000}{62} \\
\Delta \mathrm{~T}_{f} & =30.05
\end{aligned}
$$

$$
\text { F.P }=273-30=243 \mathrm{~K}
$$

25. The correct answer is [150].

$$
\begin{aligned}
& \mathrm{H}_{2} \mathrm{O}_{2} \rightarrow \mathrm{H}_{2} \mathrm{O}+\frac{1}{2} \mathrm{O}_{2} \\
& \therefore \text { Moles of } \mathrm{H}_{2} \mathrm{O}_{2} \text { in solution }
\end{aligned}=\frac{50}{22.7} \times 29 \text { Strength }=\frac{\frac{50}{22.7} \times 2}{1} \times 349 \text { } \begin{aligned}
\therefore \quad & =149.78 \\
& \approx 150
\end{aligned}
$$

26. The correct answer is [275].

$$
\begin{aligned}
& x+y+2 \rightarrow y+x^{2+} \\
& \mathrm{E}^{0} \text { Cell }=\mathrm{E}^{0} \text { Cathode }-\mathrm{E}^{0} \text { Anode } \\
& \mathrm{E}^{0} \text { Cell }=0.36-(-2.36)=2.72 \mathrm{~V}
\end{aligned}
$$

According to Nernst Equation,
27. The correct answer is [1350].

$$
\frac{t_{1}}{t_{2}}=\frac{\frac{1}{K} \ln \frac{a_{0}}{0.4 a_{0}}}{\frac{1}{K} \ln \frac{a_{0}}{0 . a_{0}}} \Rightarrow \frac{540}{t_{2}}=\frac{\ln \frac{10}{4}}{\ln 10}
$$

$$
\begin{aligned}
& \mathrm{E}_{\text {cell }}=\mathrm{E}^{0}-\frac{2.303 R T}{n F} \log \frac{\left[x^{+2}\right]}{\left[y^{+2}\right]} \\
& \mathrm{E}_{\text {cell }}=2.72-\frac{0.06}{2} \log \frac{\left[x^{+2}\right]}{\left[y^{+2}\right]} \\
& \mathrm{E}_{\text {cell }}=2.72-\frac{0.06}{2} \log \frac{0.001}{0.01} \\
& =2.72+0.03=2.75 \mathrm{~V} \\
& =275 \times 10^{-2} \mathrm{~V}
\end{aligned}
$$

$$
\begin{aligned}
& \frac{540}{t_{2}}=\frac{1-0.6}{1} \\
\Rightarrow & \frac{540}{t_{2}}=0.4 \Rightarrow t_{2}=\frac{540}{0.4}=1350 \mathrm{sec}
\end{aligned}
$$

28. The correct answer is [3].

The given reaction is exothermic.
For an exothermic reaction, on decreasing the temperature equilibrium will shift in forward direction. Hence, low temperature will be favoured for formation of $\mathrm{SO}_{3}$. According to the Le Chatelier's principle, on increasing pressure, equilibrium will shift in the direction where lesser number of gaseous moles are present. Hence, on increasing pressure equilibrium will shift in forward direction for the given system. Hence, high pressure is favourable for greater yield of $\mathrm{SO}_{3}$.
The increased yield of $\mathrm{SO}_{3}$ at equilibrium will be due to:
B. Increasing pressure
C. Adding more $\mathrm{SO}_{2}$
D. Adding more $\mathrm{O}_{2}$
29. The correct answer is [4].

$$
\begin{aligned}
\mathrm{d} & =\frac{z \times m}{a^{3}} \\
4 & =\frac{z \times 72}{6 \times 10^{23}\left(5 \times 10^{-8}\right)^{3}} \\
4 & =\frac{z \times 72}{6 \times 125 \times 10^{-1}} \\
& =\mathrm{z} \approx 4
\end{aligned}
$$

30. The correct answer is [16].

From the graph,
Slope $=\frac{1}{n}=\tan 45^{\circ}=1$
intercept $=\log \mathrm{k}=0.6020=\log 4 \mathrm{~K}=4$
Accoding to freundlich adsorption isotherm

$$
\begin{aligned}
\therefore \frac{x}{m} & =\mathrm{K} . \mathrm{P}^{1 / n} \text { or } \frac{x}{m}=4(0.4)=1.6 \\
\frac{x}{m} & =1.6=16 \times 10^{-1}
\end{aligned}
$$
