## JEE (Main) PHYSICS SOLVED PAPER

## General Instructions :

1. In Physics Section, there are 30 Questions (Q. no. 1 to 30).
2. In Physics, Section A consists of 20 multiple choice questions $\mathcal{E}$ Section B consists of 10 numerical value type questions. In Section B, candidates have to attempt any five questions out of 10.
3. There will be only one correct choice in the given four choices in Section A. For each question for Section A, 4 marks will be awarded for correct choice, 1 mark will be deducted for incorrect choice questions and zero mark will be awarded for not attempted question.
4. For Section B questions, 4 marks will be awarded for correct answer and zero for unattempted and incorrect answer.
5. Any textual, printed or written material, mobile phones, calculator etc. is not allowed for the students appearing for the test.
6. All calculations / written work should be done in the rough sheet is provided with Question Paper.

## Section A

Q.1. Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason R.

Assertion: A pendulum clock when taken to Mount Everest becomes fast.
Reason: The value of g (acceleration due to gravity) is less at Mount Everest than its value on the surface of earth.
In the light of the above statements, choose the most appropriate answer from the options given below
(1) Both A and R are correct but R is NOT the correct explanation of $A$
(2) $A$ is correct but $R$ is not correct
(3) Both A and R are correct and R is the correct explanation of A
(4) $A$ is not correct but $R$ is correct
Q.2. The frequency ( $v$ ) of an oscillating liquid drop may depend upon radius $(r)$ of the drop, density $(\rho)$ of liquid and the surface tension (s) of the liquid as : $\mathrm{v}=r^{\mathrm{a}} \rho^{\mathrm{b}} \mathrm{s}^{\mathrm{c}}$. The values of $\mathrm{a}, \mathrm{b}$ and c respectively are
(1) $\left(-\frac{3}{2}, \frac{1}{2}, \frac{1}{2}\right)$
(2) $\left(\frac{3}{2},-\frac{1}{2}, \frac{1}{2}\right)$
(3) $\left(-\frac{3}{2},-\frac{1}{2}, \frac{1}{2}\right)$
(4) $\left(\frac{3}{2}, \frac{1}{2},-\frac{1}{2}\right)$
Q.3. Given below are two statements:

Statement I : Acceleration due to earth's gravity decreases as you go 'up' or 'down' from earth's surface.
Statement II : Acceleration due to earth's gravity is same at a height ' $h$ ' and depth ' $d$ ' from earth's surface, if $h=d$.
In the light of above statements, choose the most
appropriate answer from the options given below
(1) Both Statement I and Statement II are incorrect
(2) Statement I is incorrect but statement II is correct
(3) Both Statement I and II are correct
(4) Statement I is correct but statement II is incorrect
Q.4. A long solenoid is formed by winding 70 turns $\mathrm{cm}^{-1}$. If 2.0 A current flows, then the magnetic field produced inside the solenoid is $\qquad$ $\left[\mu_{0}=4 \pi \times 10^{7} \mathrm{TmA}^{-1}\right.$ ]
(1) $88 \times 10^{-4} \mathrm{~T}$
(2) $352 \times 10^{-4} \mathrm{~T}$
(3) $176 \times 10^{-4} \mathrm{~T}$
(4) $1232 \times 10^{-4} \mathrm{~T}$
Q.5. The electric potential at the centre of two concentric half rings of radii $R_{1}$ and $R_{2}$, having same linear charge density $\lambda$ is :

(1) $\frac{\lambda}{2 \varepsilon_{0}}$
(2) $\frac{\lambda}{4 \varepsilon_{0}}$
(3) $\frac{2 \lambda}{\varepsilon_{0}}$
(4) $\frac{\lambda}{\varepsilon_{0}}$
Q.6. If the distance of the earth from Sun is $1.5 \times 10^{6}$ km . Then the distance of an imaginary planet from Sun, if its period of revolution is 2.83 years is:
(1) $6 \times 10^{6} \mathrm{~km}$
(2) $3 \times 10^{6} \mathrm{~km}$
(3) $3 \times 10^{7} \mathrm{~km}$
(4) $6 \times 10^{7} \mathrm{~km}$
Q.7. A photon is emitted in transition from $n=4$ to $n$ $=1$ level in hydrogen atom. The corresponding wavelength for this transition is (given, $h=4 \times$ $10^{-15} \mathrm{eVs}$ ) :
(1) 99.3 nm
(2) 941 nm
(3) 974 nm
(4) 94.1 nm
Q. 8. A cell of emf 90 V is connected across series combination of two resistors each of $100 \Omega$ resistance. A voltmeter of resistance $400 \Omega$ is used to measure the potential difference across each resistor. The reading of the voltmeter will be:
(1) 90 V
(2) 45 V
(3) 80 V
(4) 40 V
Q.9. If two vectors $\vec{P}=\hat{i}+2 m \hat{j}+m \hat{k}$ and $\vec{Q}=4 \hat{i}-2 \hat{j}+m \hat{k}$ are perpendicular to each other. Then, the value of $m$ will be:
(1) -1
(2) 3
(3) 2
(4) 1
Q. 10. The electric field and magnetic field components of an electromagnetic wave going through vacuum is described by
$\mathrm{E}_{x}=\mathrm{E}_{0} \sin (k z-\omega \mathrm{t})$
$\mathrm{B}_{y}=\mathrm{B}_{\mathrm{o}} \sin (k z-\omega \mathrm{t})$
Then the correct relation between $E_{o}$ and $B_{o}$ is given by
(1) $\mathrm{E}_{0} \mathrm{~B}_{0}=\omega k$
(2) $\mathrm{E}_{0}=k \mathrm{~B}_{0}$
(3) $k \mathrm{E}_{0}=\omega \mathrm{B}_{0}$
(4) $\omega \mathrm{E}_{0}=k \mathrm{~B}_{0}$
Q.11. The logic gate equivalent to the given circuit diagram is :

(1) NAND
(2) OR
(3) AND
(4) NOR
Q. 12. Let $\gamma_{1}$ be the ratio of molar specific heat at constant pressure and molar specific heat at constant volume of a monoatomic gas and $\gamma_{2}$ be the similar ratio of diatomic gas. Considering the diatomic gas molecule as a rigid rotator, the ratio, $\frac{\gamma_{1}}{\gamma_{2}}$ is :
(1) $\frac{25}{21}$
(2) $\frac{35}{27}$
(3) $\frac{21}{25}$
(4) $\frac{27}{35}$
Q.13. When a beam of white light is allowed to pass through convex lens parallel to principal axis, the different colours of light converge at different point on the principle axis after refraction. This is called:
(1) Spherical aberration
(2) Polarisation
(3) Chromatic aberration
(4) Scattering
Q. 14. A metallic rod of length ' $L$ ' is rotated with an angular speed of ' $\omega$ ' normal to a uniform magnetic field ' B' about an axis passing through one end of rod as shown in figure. The induced emf will be:

| $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\times$ | $\times$ | $\times$ |  |  |  |  |  |  |  |
| $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ |
| $\times$ | $\times$ | $\times$ |  |  |  |  |  |  |  |
| $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | 5 | $\times$ | $\times$ | $\times$ |
| $\times$ | $\times$ |  |  |  |  |  |  |  |  |
| $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ |
| $\times$ | $\times$ |  |  |  |  |  |  |  |  |
| $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ |

| $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ |
| $\times$ | $\times$ |  |  |  |  |  |  |  |  |
| $\times$ | $\times \times \times \times \times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ |
| $\times$ | $\times$ | $\times \times \times \times \times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ |

(1) $\frac{1}{4} B L^{2} \omega$
(2) $\frac{1}{2} \mathrm{~B}^{2} \mathrm{~L}^{2} \omega$
(3) $\frac{1}{4} \mathrm{~B}^{2} \mathrm{~L} \omega$
(4) $\frac{1}{2} \mathrm{BL}^{2} \omega$
Q.15. An $\alpha$-particle, a proton and an electron have the same kinetic energy. Which one of the following is correct in case of their de-Broglie wavelength:
(1) $\lambda_{a}<\lambda_{p}<\lambda_{e}$
(2) $\lambda_{a}=\lambda_{p}=\lambda_{e}$
(3) $\lambda_{a}>\lambda_{p}>\lambda_{e}$
(4) $\lambda_{a}>\lambda_{p}<\lambda_{e}$
Q.16. Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason
Assertion A : Steel is used in the construction of buildings and bridges.
Reason R : Steel is more elastic and its elastic limit is high.
In the light of above statements, choose the most appropriate answer from the options given below
(1) Both $A$ and $R$ are correct and $R$ is the correct explanation of A
(2) Both A and R are correct but R is NOT the correct explanation of A
(3) A is correct but R is not correct
(4) $A$ is not correct but $R$ is correct
Q. 17. In an Isothermal change, the change in pressure and volume of a gas can be represented for three different temperature; $\mathrm{T}_{3}>\mathrm{T}_{2}>\mathrm{T}_{1}$ as:
(1)

(2)

(3)

(4)

Q. 18. Match List I with List II

| List I |  | List II |  |
| :--- | :--- | :--- | :--- |
| A. | AM Broadcast | I. | $88-108 \mathrm{MHz}$ |
| B. | FM Broadcast | II. | $540-1600 \mathrm{kHz}$ |
| C. | Television | III. | $3.7-4.2 \mathrm{GHz}$ |
| D. | Satellite Communication | IV. | $54 \mathrm{MHz}-890 \mathrm{MHz}$ |
| Choose the correct answer from the options <br> given below: |  |  |  | given below:

(1) A-II, B-I, C-IV, D-III
(2) A-I, B-III, C-II, D-IV
(3) A-IV, B-III, C-I, D-II
(4) A-II, B-III, C-I, D-IV
Q. 19. A body of mass 200 g is tied to a spring of spring constant $12.5 \mathrm{~N} / \mathrm{m}$, while the other end of spring is fixed at point O . If the body moves about O in a circular path on a smooth horizontal surface with constant angular speed $5 \mathrm{rad} / \mathrm{s}$. Then the ratio of extension in the spring to its natural length will be :
(1) $2: 5$
(2) $1: 1$
(3) 2: 3
(4) $1: 2$
Q. 20. The velocity time graph of a body moving in a straight line is shown in figure.

The ratio of displacement to distance travelled by the body in time 0 to 10 s is :
(1) $1: 1$
(2) $1: 2$
(3) $1: 3$
(4) $1: 4$

## Section B

Q.21. Abodyofmass 1 kgbeginstomove under theaction of a time dependent force, $\overrightarrow{\mathrm{F}}=\left(t \hat{i}+3 t^{2} \hat{\mathrm{j}}\right) \mathrm{N}$ where $\hat{i}$ and $\hat{j}$ are the unit vectors along $x$ and $y$ axis. The power developed by above force, at the time $t=2 s$, will be $\qquad$ W.
Q. 22. A convex lens of refractive index 1.5 and focal length 18 cm in air is immersed in water. The change in focal length of the lens will be $\qquad$ cm
(Given refractive index of water $=\frac{4}{3}$ )
Q. 23. The energy released per fission of nucleus of ${ }^{240} \mathrm{X}$ is 200 MeV . The energy released if all the atoms in 120 g of pure ${ }^{240} \mathrm{X}$ undergo fission is $\qquad$ $\times$ $10^{25} \mathrm{MeV}\left(\right.$ Given $\mathrm{N}_{\mathrm{A}}=6 \times 10^{23}$ )
Q.24. A uniform solid cylinder with radius $R$ and length $L$ has moment of inertia $I_{1}$, about the axis of the cylinder. A concentric solid cylinder of radius $R^{\prime}=\frac{R}{2}$ and length $L^{\prime}=\frac{L}{2}$ is carved out of the original cylinder. If $I_{2}$ is the moment of inertia of the carved out portion of the cylinder then $\frac{I_{1}}{I_{2}}$ $=$ $\qquad$ (Both $\mathrm{I}_{1}$ and $\mathrm{I}_{2}$ are about the axis of the cylinder)
Q.25. A parallel plate capacitor with air between the plate has a capacitance of 15 pF . The separation between the plate becomes twice and the space between them is filled with a medium of dielectric constant 3.5 . Then the capacitance becomes $\frac{x}{4} \mathrm{pF}$.
The value of $x$ is
$\qquad$
Q. 26. A single turn current loop in the shape of a right angle triangle with sides $5 \mathrm{~cm}, 12 \mathrm{~cm}, 13 \mathrm{~cm}$ is carrying a current of 2 A . The loop is in a uniform magnetic field of magnitude 0.75 T whose direction is parallel to the current in the 13 cm side of the loop. The magnitude of the magnetic force on the 5 cm side will be $\frac{x}{130} \mathrm{~N}$. The value of
$x$ is $x$ is $\qquad$
Q.27. A mass $m$ attached to free end of a spring executes SHM with a period of 1 s . If the mass is increased by 3 kg the period of oscillation increases by one second, the value of mass $m$ is $\qquad$ kg.
Q. 28. If a copper wire is stretched to increase its length by $20 \%$. The percentage increase in resistance of the wire is $\qquad$ \%
Q. 29. Three identical resistors with resistance $R=12 \Omega$ and two identical inductors with self inductance $\mathrm{L}=5 \mathrm{mH}$ are connected to an ideal battery with emf of 12 V as shown in figure. The current
through the battery long after the switch has been closed will be $\qquad$ A.

Q.30. A Spherical ball of radius 1 mm and density $10.5 \mathrm{~g} / \mathrm{cc}$ is dropped in glycerine of coefficient of viscosity 9.8 poise and density $1.5 \mathrm{~g} / \mathrm{cc}$. Viscous force on the ball when it attains constant velocity is $3696 \times 10^{-x} \mathrm{~N}$. The value of $x$ is (Given, $g=9.8$ $\mathrm{m} / \mathrm{s}^{2}$ and $\pi=\frac{22}{7}$ )

## Answer Key

| Q. No. | Answer | Topic Name | Chapter Name |
| :---: | :---: | :---: | :---: |
| 1 | 4 | Time Period of Simple Pendulum | Oscillations |
| 2 | 3 | Dimensions | Units and Measurements |
| 3 | 4 | Variation in Acceleration Due to Gravity | Gravitation |
| 4 | 3 | Solenoid | Moving Charges and Magnetism |
| 5 | 1 | Electric Potential due to Continuous Charge Distribution | Electrostatic Potential and Capacitance |
| 6 | 2 | Kepler's Law | Gravitation |
| 7 | 4 | Line Spectrum of Hydrogen | Atoms |
| 8 | 2 | Ohm's Law | Current Electricity |
| 9 | 3 | Vectors | Mathematical Tools |
| 10 | 3 | Representation of EMW | Electromagnetic Waves |
| 11 | 3 | Logic Gates | Communication Systems |
| 12 | 1 | Specific Heats | Thermodynamics |
| 13 | 3 | Refractive Index | Ray Optics |
| 14 | 4 | Motional EMF | Electromagnetic Induction |
| 15 | 1 | de-Broglie Relation | Dual Nature of Radiation and Matter |
| 16 | 1 | Elasticity | Mechanical Properties of Solids |
| 17 | 3 | Ideal Gas Equation | Kinetic Theory of Gases |
| 18 | 1 | Bandwidth of Signals | Communication Systems |
| 19 | 3 | Rotational Motion | System of Particle and Rotational Motion |
| 20 | 3 | Graphical Representation of Motion | Motion in a Line |
| 21 | [100] | Power | Work, Energy and Power |
| 22 | [54] | Lens Maker's Formula | Ray Optics |
| 23 | [6] | Nuclear Fission | Nuclei |

## JEE (Main) PHYSICS SOLVED PAPER

## 2023 <br> $24^{\text {th }}$ Jan Shift 2

## ANSWERS WITH EXPLANATIONS

## Section A

1. Option (4) is correct.

As height increases, $g$ decreases. So statement II is
true.
Time period of simple pendulum, $\mathrm{T}=2 \pi \sqrt{\frac{l}{g}}$
or $\mathrm{T} \propto \frac{1}{\sqrt{g}}$, On Everest as $g$ is less than $g$ at surface So, time period of pendulum will increase. So statement I is false.
2. Option (3) is correct.

$$
\text { Given, } \begin{aligned}
v & =\mathrm{r}^{\mathrm{a}} \rho^{\mathrm{b}} \mathrm{~s}^{\mathrm{c}} \\
{\left[\mathrm{~T}^{-1}\right] } & =[\mathrm{L}]^{\mathrm{a}}\left[\mathrm{M}^{1} \mathrm{~L}^{-3}\right]^{\mathrm{b}}\left[\mathrm{M}^{1} \mathrm{~T}^{-2}\right]^{\mathrm{c}} \\
{\left[\mathrm{M}^{0} \mathrm{~L}^{0} \mathrm{~T}^{-1}\right] } & =\left[\mathrm{M}^{\mathrm{b}+\mathrm{c}} \mathrm{~L}^{\mathrm{a}-3 \mathrm{~b}} \mathrm{~T}^{-2 \mathrm{c}}\right]
\end{aligned}
$$

On comparing dimensions of both sides,

$$
\begin{aligned}
-2 c & =-1 \\
b+c & =0 \\
\Rightarrow \quad & \\
b & =-\mathrm{c}=-\frac{1}{2} \\
\Rightarrow \quad a-3 \mathrm{~b} & =0 \\
\Rightarrow \quad a=3 b & \Rightarrow a=-\frac{3}{2}
\end{aligned}
$$

3. Option (4) is correct.

Acceleration due to gravity decrease as we go up or down from the surface, but decrease in gravity with height is more or faster as compare with depth.
4. Option (3) is correct.

$$
\begin{aligned}
& B=\mu_{0} n i(\text { For a solenoid }) \\
& B=4 \times \frac{22}{7} \times 10^{-7} \times 70 \times 100 \times 2=176 \times 10^{-4} \mathrm{~T}
\end{aligned}
$$

5. Option (1) is correct.

Electric potential due to circular arc (linear charge)

$$
\begin{array}{rlrl} 
& & \mathrm{V}_{\mathrm{C}} & =\mathrm{V}_{1}+\mathrm{V}_{2} \\
\Rightarrow & & =\mathrm{K} \frac{\mathrm{q}_{1}}{\mathrm{r}_{1}}+\mathrm{K} \frac{\mathrm{q}_{2}}{\mathrm{r}_{2}} \\
\Rightarrow & & \frac{1}{4 \pi \varepsilon_{0}} \frac{\lambda \pi \mathrm{R}_{1}}{\mathrm{r}_{1}}+\frac{1}{4 \pi \varepsilon_{0}} \frac{\lambda \pi \mathrm{R}_{2}}{\mathrm{r}_{2}}=\frac{\lambda}{2 \varepsilon_{0}}
\end{array}
$$

6. Option (2) is correct.

According of Kepler's law, $\mathrm{T}^{2} \propto \mathrm{R}^{3}$

$$
\begin{aligned}
& \Rightarrow \quad\left(\frac{\mathrm{T}_{\mathrm{e}}}{\mathrm{~T}_{\mathrm{p}}}\right)^{2}=\left(\frac{\mathrm{R}_{\mathrm{e}}}{\mathrm{R}_{\mathrm{p}}}\right)^{3} \\
& \Rightarrow \quad\left(\frac{1}{2.83}\right)^{2}=\left(\frac{1.5 \times 10^{6}}{\mathrm{R}_{p}}\right)^{3}
\end{aligned}
$$

$$
\begin{array}{ll}
\Rightarrow & R_{p}=1.5 \times 10^{6} \times 2.83^{\frac{3}{2}} \\
\Rightarrow & R_{p}=3 \times 10^{6} \mathrm{~km}
\end{array}
$$

7. Option (4) is correct.

Here, $n_{1}=1 n_{2}=4$

$$
\begin{aligned}
& \mathrm{E}_{4}=-\frac{13.6}{\mathrm{n}^{2}}=-\frac{13.6}{16}=-0.85 \mathrm{eV} \\
& \mathrm{E}_{1}=-\frac{13.6}{\mathrm{n}^{2}}=-\frac{13.6}{1}=-13.6 \mathrm{eV}
\end{aligned}
$$

Now $\quad \mathrm{E}_{4}-\mathrm{E}_{1}=\frac{h c}{\lambda}$

$$
\begin{array}{ll}
\Rightarrow & 0.85-(-13.6)=\frac{\left(4 \times 10^{15} \times 3 \times 10^{8} \times 10^{9}\right)}{\lambda} \\
\Rightarrow & \lambda=94.1 \mathrm{~nm}
\end{array}
$$

8. Option (2) is correct.

Both resistors have same value so, voltage supplied will be equally divided across two resistors. Resistance of voltmeter will have no impact here, as it gets connected in parallel with resistors.
9. Option (3) is correct.

As vectors are perpendicular, $\vec{P} \cdot \vec{Q}=0$

$$
\begin{array}{ll}
\Rightarrow & 2 m \hat{j}+m \hat{\mathrm{k}}) \cdot(4 \hat{\mathrm{i}}-2 \hat{\mathrm{j}}+m \hat{\mathrm{k}})=0 \\
\Rightarrow & 1 \times 4+2 m \times-2+m \times m=0 \\
\Rightarrow & m^{2}-4 m+4 \\
\Rightarrow & m=2
\end{array}
$$

10. Option (3) is correct.

Since the relation between the electric and magnetic field is given as $=\frac{E_{0}}{B_{0}}=\frac{\omega}{k}$
11. Option (1) is correct.

We can see two switches are in series, so given circuit will behave as either AND or NAND gate.
Now if we see, there is earthing, so if switches are open then also blub will glow. If both switches are closed, there will be a short circuit condition, so bulb won't glow. Hence, given circuit is NAND gate.
12. Option (1) is correct.

For monoatomic gas $\quad \gamma_{1}=\frac{5}{3}=1.6$
For diatomic gas $\quad \gamma_{2}=\frac{7}{5}=1.4$

| $\Rightarrow$ |
| :--- |
| Option (3) is correct. |$\quad \frac{\gamma_{1}}{\gamma_{2}}=\frac{\frac{5}{3}}{\frac{7}{5}}=\frac{25}{21}$

When a ray of white light pass through convex lens,
different colors of light converges at different points on the principle axis after refraction. This is due to the difference in refractive index for different colors.
14. Option (4) is correct.

Motional emf is given by, $\int_{0}^{L} B \omega x d x$

$$
\begin{aligned}
& \Rightarrow \quad \varepsilon=\mathrm{B} \omega \int_{0}^{\mathrm{L}} \mathrm{xdx} \\
& \Rightarrow \quad \varepsilon=\mathrm{B} \omega\left[\frac{x^{2}}{2}\right]_{0}^{\mathrm{L}}=\frac{1}{2} \mathrm{~B} \omega \mathrm{~L}^{2}
\end{aligned}
$$

15. Option (1) is correct.

De-Broglie wavelength is given by, $\lambda=\frac{h}{\sqrt{2 m \mathrm{~K}}}$
If $K$ (kinetic energy) is constant, $\lambda \propto \frac{1}{\sqrt{m}}$
$\because m_{\alpha}>m_{\beta}>m_{\gamma}$
$\because \lambda_{\alpha}<\lambda_{\beta}<\lambda_{\gamma}$
16. Option (1) is correct.

Steel is more elastic and have high strength, so it is used in construction industry.
17. Option (3) is correct.

For an ideal gas, $\mathrm{PV}=n \mathrm{RT}$
For isothermal process, $\mathrm{P} \propto \frac{1}{\mathrm{~V}}$, As V increases, P
reduces nonlinearly
18. Option (1) is correct.

Usually satellite communication is done through higher frequency bands. It is a data based question.
19. Option (3) is correct.

Centripetal force acting on body, $m \omega^{2}(l+\Delta l)=k \Delta l$

$$
\begin{array}{ll}
\Rightarrow & \frac{l}{\Delta l}=\frac{k}{m \omega^{2}}-1 \\
\Rightarrow & \frac{l}{\Delta l}=\frac{12.5}{0.2 \times 25}-1=\frac{3}{2} \\
\Rightarrow & \frac{\Delta l}{l}=\frac{2}{3}
\end{array}
$$

20. Option (3) is correct.

Area under $v$-t gives displacement, distance
Displacement $=8 \times 2-4 \times 2+4 \times 4-2 \times 4=16 \mathrm{~m}$
Distance $=8 \times 2+4 \times 2+4 \times 4+2 \times 4=48 \mathrm{~m}$
$\Rightarrow$ Displacement : Distance $=1: 3$

## Section B

21. The correct answer is [100]

$$
\begin{aligned}
\vec{v} & =\int \frac{\mathrm{F}}{m} d t \\
\Rightarrow \quad \vec{v} & =\int \frac{\left(t \hat{i}+3 t^{2} \hat{j}\right)}{m} d t \\
\Rightarrow \quad \vec{v} & =\int_{0}^{2} t d t \hat{i}+\int_{0}^{2} 3 t^{2} d t \hat{j}
\end{aligned}
$$

$$
[\because m=1]
$$

Power, $\mathrm{p}=\overrightarrow{\mathrm{F}} \cdot \vec{v}=\left(t \hat{i}+3 t^{2} \hat{j}\right) \cdot\left(\frac{t^{2}}{2} \hat{i}+t^{3} \hat{j}\right)$
$\Rightarrow \quad \mathrm{P}=\frac{t^{3}}{2}+3 t^{5}$
$\Rightarrow \quad \mathrm{P}=\frac{8^{2}}{2}+3 \times 32=100$
22. The correct answer is [54]

From lens maker's formula, $\frac{1}{f}=(\mu-1)\left(\frac{1}{\mathrm{R}_{1}}-\frac{1}{\mathrm{R}_{2}}\right)$
In air, $\frac{1}{18}=(1.5-1) \frac{2}{\mathrm{R}}$
In water, $\frac{1}{f}=\left(\frac{1.5}{\frac{4}{3}}-1\right)\left(\frac{2}{\mathrm{R}}\right)=\frac{1}{8}\left(\frac{2}{R}\right)=\frac{1}{4 R}$
On dividing (i) by (ii)
On $\frac{f}{18}=\frac{0.5}{0.5 / 4}$
$\Rightarrow$ Focal length in water, $f=18 \times 4=72 \mathrm{~cm}$
$\Rightarrow$ Change in focal length $=72-18=54 \mathrm{~cm}$
23. The correct answer is [6]

Energy released on fission of 1 nucleus, 200 MeV
Total number of nuclei $=\frac{120}{240} \times 6 \times 10^{23}=3 \times 10^{23}$
Total energy released $=3 \times 10^{23} \times 200=6 \times 10^{25} \mathrm{MeV}$
24. The correct answer is [32]
$\mathrm{I}_{1}=\frac{\mathrm{MR}^{2}}{2}$ (MI, axis of cylinder)
Mass of cylinder of radius $R, M=\rho \pi R^{2}$
Mass of carved out cylinder , $\mathrm{M}^{\prime}=\rho \mathrm{V}^{\prime}$
$\Rightarrow M^{\prime}=\rho \pi\left(\frac{R}{2}\right)^{2} \times \frac{L}{2}$
$\Rightarrow M^{\prime}=\frac{M}{8}$
MI of carved out cylinder, $\mathrm{I}_{2}=\frac{\mathrm{M}^{\prime} \mathrm{R}^{\prime 2}}{2}$
$\Rightarrow I_{2}=\frac{\frac{\mathrm{M}}{8} \times\left(\frac{\mathrm{R}}{2}\right)^{2}}{2}=\frac{1}{32} \frac{\mathrm{MR}^{2}}{2}$
$\Rightarrow I_{1}: I_{2}=32: 1$
25. The correct answer is [105]

In air, capacitance $\quad \mathrm{C}=\frac{\varepsilon_{0} \mathrm{~A}}{d}$
In dielectric
$C^{\prime}=K \frac{\varepsilon_{0} A}{2 d}$
$\Rightarrow \quad \mathrm{C}^{\prime}=\mathrm{K} \frac{\mathrm{C}}{2}$
$\Rightarrow \quad \mathrm{C}^{\prime}=3.5 \times \frac{15}{2}=\frac{105 \mathrm{pF}}{4}$
On comparing with $\frac{x}{4} \mathrm{pF}$, we get $\mathrm{x}=105$
26. The correct answer is [9]

$$
\begin{array}{ll} 
& \vec{F}=i(\overrightarrow{d l} \times \overrightarrow{8}) \\
\Rightarrow & 2 \times 5 \times 10^{-2} \times 0.75 \times \sin (90+\theta) \\
\Rightarrow & =0.075 \times \frac{12}{13} \quad[\because \sin (90+\theta)=\cos \theta] \\
\Rightarrow \quad & =\frac{9}{130}
\end{array}
$$

On comparing with,,$\frac{x}{130}$, we get $\mathrm{x}=9$
27. The correct answer is [1]

Time period of simple pendulum, $\mathrm{T}=2 \pi \sqrt{\frac{\mathrm{~m}}{\mathrm{k}}}$

$$
\begin{equation*}
\mathrm{T}=2 \pi \sqrt{\frac{m}{k}}=1 \tag{i}
\end{equation*}
$$

$$
\begin{equation*}
\mathrm{T}=2 \pi \sqrt{\frac{m+3}{k}}=2 \tag{ii}
\end{equation*}
$$

Now, $\quad \mathrm{T}=2 \pi \sqrt{\frac{m+3}{k}}=2$
On dividing (ii) by (i), we get $\sqrt{\frac{m+3}{m}}=2$
On squaring both sides, $m+3=4 \mathrm{~m}$

$$
\Rightarrow \quad m=1 \mathrm{~kg}
$$

28. The correct answer is [44]

As length becomes 1.2 times, area will become $\frac{1}{1.2}$
$\mathrm{R}^{\prime}=\rho \times \frac{1.2 l}{\frac{\mathrm{~A}}{1.2}}=1.2^{2} \rho^{2} \frac{l}{\mathrm{~A}}=1.44 \mathrm{R}$
It means resistance is increasing by $44 \%$.
29. The correct answer is [3]

Long after closing the switch, inductors will not oppose change in current and will act like short circuit. So, all three resistors will be in parallel.
$R_{\text {eq }}=12| | 12| | 12=\frac{12}{3}=4 \Omega$
As per ohm's law, $\mathrm{I}=\frac{\mathrm{V}}{\mathrm{R}}=\frac{12}{4}=3 \mathrm{~A}$
30. The correct answer is [7]

Terminal velocity, $v_{T}=\frac{2}{9} \frac{r^{2}(\rho-\sigma) g}{n}$

$$
\Rightarrow \quad v_{T}=\frac{2}{9} \frac{10^{-6} \times(10.5-1.5) \times 10^{3} \times 9.8}{9.8 \times 0.1}
$$

$\Rightarrow \quad v_{T}=2 \times 10^{-2} \mathrm{~ms}^{-1}$
Viscose force, $\mathrm{F}=6 \pi \eta \mathrm{rv}$

$$
\begin{array}{ll}
\Rightarrow & F=6 \times \frac{22}{7} \times 9.8 \times 0.1 \times 10^{-3} \times 2 \times 10^{-2} \\
\Rightarrow & F=3696 \times 10^{-7}
\end{array}
$$

On comparing with $3696 \times 10^{-x}$, we get $x=7$
