## JEE (Main) PHYSICS SOLVED PAPER

## Section A

Q.1. Eight equal drops of water are falling through air with a steady speed of $10 \mathrm{~cm} \mathrm{~s}^{-1}$. If the drops collapse, the new velocity is:
(1) $10 \mathrm{~cm} \mathrm{~s}^{-1}$
(2) $40 \mathrm{~cm} \mathrm{~s}^{-1}$
(3) $16 \mathrm{~cm} \mathrm{~s}^{-1}$
(4) $5 \mathrm{~cm} \mathrm{~s}^{-1}$
Q. 2. Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason R. Assertion A: A bar magnet dropped through a metallic cylindrical pipe takes more time to come down compared to a non-magnetic bar with same geometry and mass.
Reason R: For the magnetic bar, Eddy currents are produced in the metallic pipe which oppose the motion of the magnetic bar.
In the light of the above statements, choose the correct answer from the options given below:
(1) $A$ is true but $R$ is false
(2) Both $A$ and $R$ are true but $R$ is NOT the correct explanation of A
(3) A is false but $R$ is true
(4) Both $A$ and $R$ are true and $R$ is the correct explanation of A
Q.3. A space ship of mass $2 \times 10^{4} \mathrm{~kg}$ is launched into a circular orbit close to the earth surface. The additional velocity to be imparted to the space ship in the orbit to overcome the gravitational pull will be (if $g=10 \mathrm{~m} \mathrm{~s}^{-2}$ and radius of earth $=6400 \mathrm{~km}$ ):
(1) $7.9(\sqrt{2}-1) \mathrm{km} \mathrm{s}^{-1}$
(2) $7.4(\sqrt{2}-1) \mathrm{km} \mathrm{s}^{-1}$
(3) $11.2(\sqrt{2}-1) \mathrm{km} \mathrm{s}^{-1}$
(4) $8(\sqrt{2}-1) \mathrm{km} \mathrm{s}^{-1}$
Q.4. A projectile is projected at $30^{\circ}$ from horizontal with initial velocity $40 \mathrm{~m} \mathrm{~s}^{-1}$. The velocity of the projectile at $t=2 \mathrm{~s}$ from the start will be (Given $g=10 \mathrm{~m} \mathrm{~s}^{-2}$ ):
(1) Zero
(2) $20 \sqrt{3} \mathrm{~m} \mathrm{~s}^{-1}$
(3) $40 \sqrt{3} \mathrm{~m} \mathrm{~s}^{-1}$
(4) $20 \mathrm{~m} \mathrm{~s}^{-1}$
Q.5. A plane electromagnetic wave of frequency 20 MHz propagates in free space along $x$-direction. At a particular space and time, $\vec{E}=6.6 \hat{j} \mathrm{v} \mathrm{m}^{-1}$. What is $\vec{B}$ at this point?
(1) $-2.2 \times 10^{-8} \hat{k}$ T
(2) $-2.2 \times 10^{-8} \hat{i} \mathrm{~T}$
(3) $2.2 \times 10^{-8} \hat{k}$ T
(4) $2.2 \times 10^{-8} \hat{i} \mathrm{~T}$
Q. 6. A car $P$ travelling at $20 \mathrm{~m} \mathrm{~s}^{-1}$ sounds its horn at a frequency of 400 Hz . Another car Q is travelling
behind the first car in the same direction with a velocity $40 \mathrm{~m} \mathrm{~s}^{-1}$. The frequency heard by the passenger of the car Q is approximately (Take, velocity of sound $=360 \mathrm{~m} \mathrm{~s}^{-1}$ ):
(1) 471 Hz
(2) 514 Hz
(3) 421 Hz
(4) 485 Hz
Q.7. A body of mass 500 g moves along $x$-axis such that it's velocity varies with displacement $x$ according to the relation $v=10 \sqrt{x} \mathrm{~m} \mathrm{~s}^{-1}$ the force acting on the body is:
(1) 25 N
(2) 5 N
(3) 166 N
(4) 125 N
Q. 8. The ratio of the de-Broglie wavelengths of proton and electron having same Kinetic energy: (Assume $m_{p}=m_{e} \times 1849$ ):
(1) $1: 62$
(2) $1: 30$
(3) $1: 43$
(4) $2: 43$
Q.9. If force (F), velocity (V) and time (T) are considered as fundamental physical quantities, then dimensional formula of density will be:
(1) $\mathrm{FV}^{-2} \mathrm{~T}^{2}$
(2) $\mathrm{F}^{2} \mathrm{~V}^{4} \mathrm{~T}^{-6}$
(3) $\mathrm{FV}^{-4} \mathrm{~T}^{-2}$
(4) $\mathrm{F}^{2} \mathrm{~V}^{-2} \mathrm{~T}^{6}$
Q.10. An electron is allowed to move with constant velocity along the axis of current carrying straight solenoid.
A. The electron will experience magnetic force along the axis of the solenoid.
B. The electron will not experience magnetic force.
C. The electron will continue to move along the axis of the solenoid.
D. The electron will be accelerated along the axis of the solenoid.
E. The electron will follow parabolic pathinside the solenoid.
Choose the correct answer from the options given below:
(1) A and D only
(2) B, C and D only
(3) B and E only
(4) B and C only
Q.11. The Thermodynamic process, in which internal energy of the system remains constant is:
(1) Isobaric
(2) Isochoric
(3) Adiabatic
(4) Isothermal
Q. 12. In satellite communication, the uplink frequency band used is:
(1) $76-88 \mathrm{MHz}$
(2) $420-890 \mathrm{MHz}$
(3) $3.7-4.2 \mathrm{GHz}$
(4) $5.925-6.425 \mathrm{GHz}$
Q.13. The logic operations performed by the given digital circuit is equivalent to:

(1) OR
(2) NAND
(3) NOR
(4) AND
Q. 14.

The current flowing through $\mathrm{R}_{2}$ is:
(1) $\frac{1}{3} \mathrm{~A}$
(2) $\frac{1}{4} \mathrm{~A}$
(3) $\frac{2}{3} \mathrm{~A}$
(4) $\frac{1}{2} \mathrm{~A}$
Q. 15. When vector $\vec{A}=2 \hat{i}+3 \hat{j}+2 \hat{k}$ is subtracted from vector $\vec{B}$, it gives a vector equal to $2 \hat{j}$. Then the magnitude of vector $\vec{B}$ will be:
(1) 3
(2) $\sqrt{5}$
(3) $\sqrt{33}$
(4) $\sqrt{6}$
Q. 16. If V is the gravitational potential due to sphere of uniform density on its surface, then its value at the center of sphere will be:
(1) $\frac{4}{3} \mathrm{~V}$
(2) V
(3) $\frac{3 \mathrm{~V}}{2}$
(4) $\frac{V}{2}$
Q.17. The root mean square speed of molecules of nitrogen gas at $27^{\circ} \mathrm{C}$ is approximately: (Given mass of a nitrogen molecule $=4.6 \times 10^{-26} \mathrm{~kg}$ and take Boltzmann constant $k_{\mathrm{B}}=1.4 \times 10^{-23} \mathrm{~J} \mathrm{~K}^{-1}$ ):
(1) $1260 \mathrm{~m} \mathrm{~s}^{-1}$
(2) $91 \mathrm{~m} \mathrm{~s}^{-1}$
(3) $523 \mathrm{~m} \mathrm{~s}^{-1}$
(4) $27.4 \mathrm{~m} \mathrm{~s}^{-1}$
Q. 18. The energy of $\mathrm{He}^{+}$ion in its first excited state is, (The ground state energy for the Hydrogen atom is -13.6 e V ):
(1) -13.6 e V
(2) -54.4 e V
(3) -27.2 e V
(4) -3.4 e V
Q. 19. When one light ray is reflected from a plane mirror with $30^{\circ}$ angle of reflection, the angle of deviation of the ray after reflection is:
(1) $140^{\circ}$
(2) $130^{\circ}$
(3) $120^{\circ}$
(4) $110^{\circ}$
Q.20. A capacitor of capacitance $C$ is charge $d$ to a potential V. The flux of the electric field through a closed surface enclosing the positive plate of the capacitor is:
(1) Zero
(2) $\frac{\mathrm{CV}}{\varepsilon_{0}}$
(3) $\frac{2 \mathrm{CV}}{\varepsilon_{0}}$
(4) $\frac{\mathrm{CV}}{2 \varepsilon_{0}}$

## Section B

Q.21. A coil has an inductance of 2 H and resistance of $4 \Omega$. A 10 V potential is applied across the coil. The energy stored in the magnetic field after the current has built up to its equilibrium value will be $\qquad$ $\times 10^{-2} \mathrm{~J}$.
Q.22. A metallic cube of side 15 cm moving along $y$-axis at a uniform velocity of $2 \mathrm{~m} \mathrm{~s}^{-1}$. In a region
of uniform magnetic field of magnitude 0.5 T directed along $z$-axis. In equilibrium the potential difference between the faces of higher and lower potential developed because of the motion through the field will be $\qquad$ mV .

Q.23. In the given circuit:
$\mathrm{C}_{1}=2 \mu \mathrm{~F}, \mathrm{C}_{2}=0.2 \mu \mathrm{~F}, \mathrm{C}_{3}=2 \mu \mathrm{~F}, \mathrm{C}_{4}=4 \mu \mathrm{~F}$, $\mathrm{C}_{5}=2 \mu \mathrm{~F}, \mathrm{C}_{6}=2 \mu \mathrm{~F}$. The charge stored on capacitor $\mathrm{C}_{4}$ is $\qquad$ $\mu \mathrm{C}$.

Q.24. A nucleus disintegrates into two nuclear parts, in such a way that ratio of their nuclear sizes is $1: 2^{1 / 3}$. Their respective speed, have a ratio of $n$ : 1 . The value of $n$ is $\qquad$ _.
Q.25. The surface tension of soap solution is $3.5 \times 10^{-2} \mathrm{~N} \mathrm{~m}^{-1}$. The amount of work done required to increase the radius of soap bubble from 10 cm to 20 cm is $\qquad$ $\times 10^{-4} \mathrm{~J}$. (take $\pi=\frac{22}{7}$ )
Q.26. A circular plate is rotating in horizontal plane, about an axis passing through its center perpendicular to the plate, with an angular velocity $\Omega$. A person sits at the center having two dumbbells in his hands. When he stretches out his hands, the moment of inertia of the system becomes triple. If E be the initial Kinetic energy of the system, then final Kinetic energy will be $\frac{E}{x}$. The value of $x$ is?
Q. 27. A block of mass 5 kg starting from rest pulled up on a smooth incline plane making an angle of $30^{\circ}$ with horizontal with an affective acceleration of $1 \mathrm{~m} \mathrm{~s}^{-2}$. The power delivered by the pulling force at $t=10 \mathrm{~s}$ from the starts is $\qquad$ W. [use $\left.g=10 \mathrm{~m} \mathrm{~s}^{-2}\right]$ (Calculate the nearest integer value)
Q.28. As shown in the figure, a plane mirror is fixed at a height of 50 cm from the bottom of tank containing water $\left(\mu=\frac{4}{3}\right)$. The height of water
in the tank is 8 cm . A small bulb is placed at the bottom of the water tank. The distance of image of the bulb formed by mirror from the bottom of the tank is $\qquad$ cm .

Q.29. Two identical cells each of emf 1.5 V are connected in series across a $10 \Omega$ resistance. An ideal voltmeter connected across $10 \Omega$ resistance reads 1.5 V . The internal resistance of each cell is
$\qquad$ $\Omega$.
Q.30. A wire of density $8 \times 10^{3} \mathrm{~kg} \mathrm{~m}^{-3}$ is stretched between two clamps 0.5 m apart. The extension developed in the wire is $3.2 \times 10^{-4} \mathrm{~m}$. If $\mathrm{Y}=8 \times 10^{10} \mathrm{~N} \mathrm{~m}^{-2}$, the fundamental frequency of vibration in the wire will be $\qquad$ Hz.

## Answer Key

| Q. No. | Answer | Topic name | Chapter name |
| :---: | :---: | :---: | :---: |
| 1 | (2) | Terminal velocity | Mechanical properties of fluids |
| 2 | (4) | Eddy currents | Electromagnetic induction |
| 3 | (4) | Escape velocity | Gravitation |
| 4 | (2) | Projectile motion | Motion in a plane |
| 5 | (3) | Propogation of EMW | Electromagnetic waves |
| 6 | (3) | Doppler's effect | Waves |
| 7 | (1) | Acceleration | Motion in straight line |
| 8 | (3) | de-Broglie equation | Dual nature of radiation and matter |
| 9 | (3) | Dimensions | Units and dimesnions |
| 10 | (4) | Solenoid | Moving charges and magnetism |
| 11 | (4) | First law of thermodynamics | Thermodynamics |
| 12 | (4) | Space waves | Communication systems |
| 13 | (4) | Logic gates | Semiconductors |
| 14 | (1) | Electric circuit | Current electricity |
| 15 | (3) | Vectors | Motion in a plane |
| 16 | (3) | Gravitational potential energy | Gravitation |
| 17 | (3) | RMS speed of gases | Kinetic theory of gases |
| 18 | (4) | Atomic spectrum | Atoms |
| 19 | (3) | Refraction | Ray optics |
| 20 | (2) | Gauss theorem | Electric charges and fields |
| 21 | [625] | Energy stored in an inductor | Current electricity |
| 22 | [150] | Potential | Moving charges and magnetism |
| 23 | [4] | Electric circuit | Electrostatic potential and capacitance |
| 24 | [2] | Momentum | Laws of motion |
| 25 | [264] | Surface tension | Mechanical properties of fluids |
| 26 | [3] | Angular momentum | System of particles and rotational motion |
| 27 | [300] | Motion on an inclined plane | Laws of motion |
| 28 | [98] | Refraction | Ray optics |
| 29 | [5] | Internal resistance of a cell | Current electricity |
| 30 | [80] | Fundamental frequency | Waves |

## SOLUTIONS

## Section A

1. Option (2) is correct.

Let radius of small bubbles $=r$
Radius of larger bubble $=R$
After collapse volume will remain same, hence

$$
\begin{array}{rlrl} 
& & \frac{4}{3} \pi R^{3} & =8 \times \frac{4}{3} \pi r^{3} \\
\Rightarrow & R & =2 r
\end{array}
$$

Velocity of object passing though a liquid,

$$
v=\frac{2}{9} \frac{r^{2}(\rho-\sigma) g}{\eta}
$$

where, $\rho$ is the density of bubble, and $\sigma$ is the density of fluid (air)
$\Rightarrow v \propto r^{2}$
Now $\quad \frac{v_{1}}{v_{2}}=\left(\frac{r}{R}\right)^{2}=\left(\frac{r}{2 r}\right)^{2}=\frac{1}{4}$
$\Rightarrow \quad v_{2}=4 v_{1}=4 \times 10=40 \mathrm{~cm} / \mathrm{s}$
Trick: $\quad v^{\prime}=v n^{2 / 3}=10 \times 8^{2 / 3}=40 \mathrm{~cm} \mathrm{~s}^{-1}$
2. Option (4) is correct.

When a magnet moves through a metallic pipe, eddy current get induced in the pipe.
Hence, Assertion A is true.
According to Lenz's law direction of this current will be such that it opposes its cause, hence eddy current will try to slow down movement of magnet.
Hence, reason R correctly explains the assertion.
3. Option (4) is correct.

Velocity of object in circular orbit,

$$
v=\sqrt{\frac{G M}{R}}
$$

To escape its velocity must be

$$
v_{\text {escape }}=\sqrt{\frac{2 G M}{r}}
$$

Additional velocity needed, $v^{\prime}=v_{\text {escape }}-v$

$$
\begin{aligned}
\Rightarrow \quad v^{\prime} & =\sqrt{\frac{2 G M}{r}}-\sqrt{\frac{G M}{R}} \quad \quad\left[\frac{G M}{R^{2}}=g, r=R\right] \\
\Rightarrow \quad v^{\prime} & =\sqrt{2 g R}-\sqrt{g R} \\
& =\sqrt{g R}(\sqrt{2}-1) \\
& =\sqrt{10^{-2} \times 6400}(\sqrt{2}-1) \\
& =8(\sqrt{2}-1) \mathrm{km} \mathrm{~s}^{-1}
\end{aligned}
$$

4. Option (2) is correct.

Given, $u=40 \mathrm{~m} \mathrm{~s}^{-1}, \theta=30^{\circ}$
$u_{x}=u \cos \theta=40 \cos 30=20 \sqrt{3} \mathrm{~m} \mathrm{~s}^{-1}$
$u_{y}=u \sin \theta=40 \sin 30=20 \mathrm{~m} \mathrm{~s}^{-1}$

After

$$
\begin{aligned}
t & =2 \mathrm{~s}, \\
v_{x} & =u_{x}=20 \sqrt{3} \\
v_{y} & =u_{y}-g t=20-10 \times 2=0
\end{aligned}
$$

Since $y$ component of velocity is zero,

$$
\text { hence } \quad v=v_{x}=20 \sqrt{3}
$$

5. Option (3) is correct.

Direction of $\overrightarrow{\mathrm{B}}$ of $E M W=\vec{C} \times \vec{E}=\hat{i} \times \hat{j}=\hat{k}$
Magnitude, $|\vec{B}|=\frac{|\vec{E}|}{C}=\frac{6.6}{3 \times 10^{8}}=2.2 \times 10^{-8} \mathrm{~T}$

$$
\therefore \quad \vec{B}=2.2 \times 10^{-8} \hat{k} \mathrm{~T}
$$

6. Option (3) is correct.

Given, $v_{P}=20 \mathrm{~ms}^{-1}, v_{Q}=40 \mathrm{~ms}^{-1}$
$v_{s}=360 \mathrm{~ms}^{-1}, f_{\text {horn }}=400 \mathrm{~Hz}$
$f_{\text {approx. }}=\left[\frac{v_{S}-\left(-v_{Q}\right)}{v_{S}-\left(-v_{P}\right)}\right] f=\left[\frac{360+40}{360+20}\right] \times 400=421 \mathrm{~Hz}$
7. Option (1) is correct.

Given, $m=500 \mathrm{~g}, v=10 \sqrt{x}$

$$
\begin{aligned}
a & =v \frac{d v}{d x}=10 \sqrt{x} \frac{d(10 \sqrt{x})}{d x} \\
& =10 \sqrt{x} \frac{10}{2 \sqrt{x}}=50 \mathrm{~m} \mathrm{~s}^{-2}
\end{aligned}
$$

Force, $\mathrm{F}=m a=0.5 \times 50=25 \mathrm{~N}$
8. Option (3) is correct.
de-Broglie wavelength,

$$
\begin{array}{rlrl}
\lambda & =\frac{h}{\sqrt{2 m K E}} \\
\therefore \quad K E_{p} & =K E_{e} & {\left[\therefore \lambda \propto \frac{1}{\sqrt{m}}\right]}
\end{array}
$$

$$
\text { So, } \quad \frac{\lambda_{p}}{\lambda_{e}}=\sqrt{\frac{m_{e}}{m_{p}}}=\sqrt{\frac{m_{e}}{1849 \times m_{e}}}=\frac{1}{43}
$$

9. Option (3) is correct.

Let $\rho \propto \mathrm{F}^{a} \mathrm{~V}^{b} \mathrm{~T}^{c}$ or $\rho=\mathrm{kF}^{a} \mathrm{~V}^{b} \mathrm{~T}^{c}$
Here $k$ is a dimensionless constant.

$$
\begin{aligned}
{\left[\mathrm{M}^{1} \mathrm{~L}^{-3} \mathrm{~T}^{0}\right] } & =\left[\mathrm{M}^{1} \mathrm{~L}^{1} \mathrm{~T}^{-2}\right]^{a}\left[\mathrm{~L}^{1} \mathrm{~T}^{-1}\right]^{b}\left[\mathrm{~T}^{1}\right]^{c} \\
\Rightarrow \mathrm{M}^{1} \mathrm{~L}^{-3} \mathrm{~T}^{0} & =\mathrm{M}^{a} \mathrm{~L}^{a+b} \mathrm{~T}^{-2 a-b+c}
\end{aligned}
$$

Comparing the dimensions of both sides

$$
\begin{array}{rl}
a & =1 \\
a+b & =-3 \\
b & b \\
\Rightarrow & -4 \\
-2 a-b+c & =0 \\
\Rightarrow & c \\
\text { Hence, } \quad \rho & =-2 \\
\mathrm{~F}^{1} \mathrm{~V}^{-4} \mathrm{~T}^{-2}
\end{array}
$$

10. Option (4) is correct.

Inside a solenoid magnetic field is parallel and constant, when particle moves along, axis $v$ and $B$ are parallel.

So, $\mathrm{F}=q v \mathrm{~B} \sin 0=0$
In the absence of magnetic force, particle will continue moving along the axis with constant velocity.
11. Option (4) is correct.

Internal energy is given by,

$$
\Delta U=n C_{v} \Delta T
$$

For isothermal processes,

$$
\Delta T=0
$$

Hence,

$$
\Delta U=n C_{v} \times 0=0
$$

or
$U=$ constant
12. Option (4) is correct.

Uplink frequency is the frequency of signals going from ground station to satellites $\sim 5.8-6.2 \mathrm{GHz}$.
13. Option (4) is correct.

| Inputs |  | $\gamma_{1}=$ <br> $A+B$ | $\gamma_{2}=A \cdot B$ | $\gamma_{3}=\overline{\gamma_{1} \cdot \gamma_{2}}$ | $\Upsilon=\overline{\gamma_{3}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | B |  |  |  |  |
| 0 | 0 | 1 | 0 | 1 | 0 |
| 0 | 1 | 1 | 0 | 1 | 0 |
| 1 | 0 | 1 | 0 | 1 | 0 |
| 1 | 1 | 0 | 1 | 0 | 1 |

Hence, final output is similar to that of AND gate.
14. Option (1) is correct.

Equivalent resistance is given by,
$\left.R=\left(\left(\left(\left(R_{1}+R_{2}\right)| | R_{3}\right)+R_{4}\right)| | R_{7}\right)+R_{5}\right)\left|\mid R_{6}\right.$
$R=(((((2+4)| | 6)+3)| | 3)+2)| | 4$
$R=4 \Omega$
Net current, $i=\frac{V}{R}=\frac{8}{4}=2 \mathrm{~A}$
From the concept of symmetry, current in $R_{2}, i_{2}=\frac{1}{3} \mathrm{~A}$
15. Option (3) is correct.

Given, $\vec{B}-\vec{A}=2 \hat{j}$
Or, $\vec{B}-(2 \hat{i}+3 \hat{j}+2 \hat{k})=0 \hat{i}+2 \hat{j}+0 \hat{k}$
Or, $\quad \vec{B}=2 \hat{i}+5 \hat{j}+2 \hat{k}$

Or,

$$
|\vec{B}|=\sqrt{2^{2}+5^{2}+2^{2}}=\sqrt{33}
$$

16. Option (3) is correct.

Gravitational potential at a point inside a sphere is given by $-\frac{G M}{2 R^{3}}\left(3 R^{2}-x^{2}\right)$.

At surface, $x=R$, hence

$$
V=-\frac{G M}{R}
$$

At center, $x=0$, hence
$V_{\text {centre }}=-\frac{G M}{2 R^{3}}\left(3 R^{2}\right)=-\frac{3 G M}{2 R}=1.5 \mathrm{~V}$
17. Option (3) is correct.

Given, Temperature of gas, $T=27+273=300 \mathrm{~K}$

Mass of nitrogen molecule, $m=4.6 \times 10^{-26} \mathrm{~kg}$
r.m.s. speed of gas is given by, $v_{\mathrm{rms}}=\sqrt{\frac{3 k T}{m}}$

$$
\begin{aligned}
v_{r m s} & =\sqrt{\frac{3 k T}{m}} \\
& =\sqrt{\frac{3 \times 1.4 \times 10^{-23} \times 300}{4.6 \times 10^{-26}}} \\
& =522.4 \mathrm{~m} \mathrm{~s}^{-1} \text { or } \approx 523 \mathrm{~m} \mathrm{~s}^{-1}
\end{aligned}
$$

18. Option (4) is correct.

Energy of atom in $n^{\text {th }}$ orbit,

$$
E_{n}=-\frac{13.6 \mathrm{Z}^{2}}{n^{2}} \mathrm{e} \mathrm{~V}
$$

Here, $n=2, Z=2$

$$
\begin{aligned}
E_{n} & =-\frac{13.6 \times 2^{2}}{2^{2}} \mathrm{eV} \\
& =-13.6 \mathrm{eV}
\end{aligned}
$$

19. Option (3) is correct.

Angle of deviation,
$\delta=180-(\angle i+\angle r)$
$\delta=180^{\circ}-\left(30^{\circ}+30^{\circ}\right) \quad[\angle i=\angle r]$
$\delta=180^{\circ}-60^{\circ}=120^{\circ}$
20. Option (2) is correct.

As per Gauss law, $\phi=\frac{q_{i n}}{\varepsilon_{0}}=\frac{C V}{\varepsilon_{0}}$

## Section B

21. The correct answer is (625).

Given, Applied voltage $=10 \mathrm{~V}$,
$L=2 \mathrm{H}, \mathrm{R}=4 \Omega$
At steady state, inductor behaves like short circuit.
Hence, $i=\frac{V}{R}=\frac{10}{4}=2.5 \mathrm{~A}$
$E_{\text {inductor }}=\frac{1}{2} L i^{2}=\frac{1}{2} \times 2 \times 2.5^{2}=6.25 \mathrm{~J}$
or $E_{\text {inductor }}=625 \times 10^{-2} \mathrm{~J}$
22. The correct answer is (150).

Potential of surface passing through origin,

$$
V=0
$$

Potential of other surface,

$$
\begin{aligned}
V^{\prime} & =v B l \\
V^{\prime} & =2 \times 0.5 \times 0.15 \\
& =0.15 \text { volt or } 150 \mathrm{mV}
\end{aligned}
$$

23. The correct answer is (4).

$$
\begin{aligned}
& \frac{1}{C^{\prime}}=\frac{1}{C_{3}}+\frac{1}{C_{4}}+\frac{1}{C_{5}}=\frac{1}{2}+\frac{1}{4}+\frac{1}{2} \\
& C^{\prime}=\frac{5}{4} \mu F \\
& C^{\prime \prime}=C^{\prime}+C_{2}=\frac{5}{4}+0.2=1.45 \mu \mathrm{~F}
\end{aligned}
$$

$$
\begin{aligned}
\frac{1}{C_{e q}} & =\frac{1}{C^{\prime \prime}}+\frac{1}{C_{1}}+\frac{1}{C_{6}}=\frac{1}{C^{\prime \prime}}+\frac{1}{2}+\frac{1}{2} \\
\Rightarrow \quad C_{e q} & =0.5 \mu \mathrm{~F} \\
\text { Now, } Q & =C_{e q} \times V=0.5 \times 10=5 \mu \mathrm{C} \\
Q^{\prime} & =\frac{5 \mu \mathrm{C} \times 0.8}{0.8+0.2}=4 \mu \mathrm{C}
\end{aligned}
$$

24. The correct answer is (2).

As per conservation of linear momentum,

$$
\begin{array}{ll}
\Rightarrow & m_{1} v_{1}=m_{2} v_{2} \\
\Rightarrow & \frac{v_{1}}{v_{2}}=\frac{m_{2}}{m_{1}}=\frac{\rho \times \frac{4}{3} \times \pi \times r_{2}^{3}}{\rho \times \frac{4}{3} \times \pi \times r_{1}^{3}} \\
\Rightarrow & \frac{v_{1}}{v_{2}}=\frac{r_{2}^{3}}{r_{1}^{3}}=\left(\frac{2^{1 / 3}}{1}\right)^{3}=\frac{2}{1}
\end{array}
$$

Comparing with $n: 1$, we get $n=2$.
25. The correct answer is (264).

Here, initial radius, $r=10 \mathrm{~cm}$ or 0.1 m
Final radius, $\quad r^{\prime}=20 \mathrm{~cm}$ or 0.2 m
Work done, $\quad \mathrm{W}=\sigma \times \Delta \mathrm{SA}$

$$
\begin{aligned}
\Rightarrow & W & =\sigma \times 2 \times 4 \pi\left(r^{\prime 2}-r^{2}\right) \\
\Rightarrow & W & =3.5 \times 10^{-2} \times 8 \times \frac{22}{7}\left(0.2^{2}-0.1^{2}\right) \\
& & =264 \times 10^{-4} \mathrm{~J}
\end{aligned}
$$

26. The correct answer is (3).

Applying conservation of angular momentum

$$
\begin{array}{ll} 
& I_{1} \omega_{1}=I_{2} \omega_{2} \\
\Rightarrow & I \omega=3 I \omega_{2} \\
\Rightarrow & \omega_{2}=\frac{\omega}{3}
\end{array}
$$

Kinetic energy of system,

$$
E=\frac{1}{2} I \omega^{2}
$$

New kinetic energy,

$$
\begin{aligned}
E^{\prime} & =\frac{1}{2} \times 3 I\left(\frac{\omega}{3}\right)^{2}=\frac{1}{3}\left(\frac{1}{2} I \omega^{2}\right) \\
\Rightarrow \quad & E^{\prime}
\end{aligned}=\frac{E}{3}
$$

Comparing with $\frac{E}{x}$ we get $x=3$
27. The correct answer is (300).

From FBD on the block

$$
\begin{aligned}
& F-m g \sin 30=m a \\
& F=m g \sin 30+m a \\
& \Rightarrow \quad F=5 \times 10 \times \frac{1}{2}+5 \times 1=30 \mathrm{~N} \\
& \text { Now, } \quad u=0 \mathrm{~m} \mathrm{~s}^{-1}, a=1 \mathrm{~m} \mathrm{~s}^{-2}, t=10 \mathrm{~s} \\
& v=u+a t=0+1 \times 10=10 \mathrm{~m} \mathrm{~s}^{-1} \\
& \mathrm{P}=\mathrm{Fv}=30 \times 10=300 \text { watt }
\end{aligned}
$$

28. The correct answer is (98).

$$
\begin{aligned}
& \mu=\frac{\text { Real depth }}{\text { Apparent depth }} \\
& d_{a}=\frac{8}{\frac{8}{3}}=6 \mathrm{~cm}
\end{aligned}
$$

Apparent distance between object and mirror is $50-(8-6)=48 \mathrm{~cm}$, since object and image are at same distance so image will also be at 48 cm . Hence, total distance between image and actual position of object is $48+50=98 \mathrm{~cm}$.
29. The correct answer is (5).

$$
\begin{aligned}
& \text { Given, } \\
& E_{1}=E_{2}=1.5 \mathrm{~V} \\
& r_{1}=r_{2}=r, R=10 \Omega \\
& I=\frac{E_{1}+E_{2}}{R+r_{1}+r_{2}}=\frac{1.5+1.5}{10+2 r}=\frac{1.5}{10} \\
& \Rightarrow \quad 30=15+3 r \\
& \Rightarrow \quad r=5 \Omega
\end{aligned}
$$

30. The correct answer is (80).

Fundamental frequency,

$$
\begin{aligned}
f & =\frac{1}{2 l} \sqrt{\frac{T}{m}} \\
f & =\frac{1}{2 l} \sqrt{\frac{Y A \Delta l}{\rho l}} \\
f & =\frac{1}{2 \times 0.5} \sqrt{\frac{8 \times 10^{10} \times 3.2 \times 10^{-4}}{8 \times 10^{3} \times 0.5}} \\
f & =\sqrt{6400} \\
& =80 \mathrm{~Hz}
\end{aligned}
$$
